Table of Contents

Preface to the Second Edition **v**

Acknowledgments **vii**

Chapter 1. Introduction **1**
1.1 Overview . . . 3
1.2 Scale of Measurement . . . 3
1.3 Sampling Frameworks . . . 6
1.4 Overview of Analysis Strategies . . . 7
1.5 Working with Tables in the SAS System . . . 10
1.6 Using This Book . . . 15

Chapter 2. The 2 $\times$ 2 Table **17**
2.1 Introduction . . . 19
2.2 Chi-Square Statistics . . . 20
2.3 Exact Tests . . . 23
2.4 Difference in Proportions . . . 29
2.5 Odds Ratio and Relative Risk . . . 32
2.6 Sensitivity and Specificity . . . 39
2.7 McNemar's Test . . . 40

Chapter 3. Sets of 2 $\times$ 2 Tables **43**
3.1 Introduction . . . 45
3.2 Mantel-Haenszel Test . . . 45
3.3 Measures of Association . . . 57

Chapter 4. Sets of 2 $\times$ r and s $\times$ 2 Tables **65**
4.1 Introduction . . . 67
4.2 Sets of $2 \times r$ Tables . . . 67
4.3 Sets of $s \times 2$ Tables . . . 78
4.4 Relationships Between Sets of Tables . . . 86

Chapter 5. The s $\times$ r Table **89**
5.1 Introduction . . . 91
5.2 Association . . . 91
5.3 Exact Tests for Association . . . 100
5.4 Measures of Association . . . 105
5.5 Observer Agreement . . . 111
5.6 Test for Ordered Differences . . . 116

Chapter 6. Sets of s $\times$ r Tables **121**
6.1 Introduction . . . 123
6.2 General Mantel-Haenszel Methodology . . . 124

6.3 Mantel-Haenszel Applications 127
6.4 Advanced Topic: Application to Repeated Measures 137

Chapter 7. Nonparametric Methods **159**
7.1 Introduction 161
7.2 Wilcoxon-Mann-Whitney Test 161
7.3 Kruskal-Wallis Test 165
7.4 Friedman's Chi-Square Test 168
7.5 Aligned Ranks Test for Randomized Complete Blocks 170
7.6 Durbin's Test for Balanced Incomplete Blocks 171
7.7 Rank Analysis of Covariance 174

Chapter 8. Logistic Regression I: Dichotomous Response **181**
8.1 Introduction 183
8.2 Dichotomous Explanatory Variables 184
8.3 Using the CLASS Statement 195
8.4 Qualitative Explanatory Variables 203
8.5 Continuous and Ordinal Explanatory Variables 211
8.6 A Note on Diagnostics 217
8.7 Maximum Likelihood Estimation Problems and Alternatives 222
8.8 Exact Methods in Logistic Regression 225
8.9 Using the CATMOD and GENMOD Procedures for Logistic Regression . . . 232
Appendix A: Statistical Methodology for Dichotomous Logistic Regression . . . 239

Chapter 9. Logistic Regression II: Polytomous Response **241**
9.1 Introduction 243
9.2 Ordinal Response: Proportional Odds Model 243
9.3 Nominal Response: Generalized Logits Model 257

Chapter 10. Conditional Logistic Regression **271**
10.1 Introduction 273
10.2 Paired Observations from a Highly Stratified Cohort Study 273
10.3 Clinical Trials Study Analysis 276
10.4 Crossover Design Studies 283
10.5 General Conditional Logistic Regression 295
10.6 Paired Observations in a Retrospective Matched Study 300
10.7 1:m Conditional Logistic Regression 309
10.8 Exact Conditional Logistic Regression in the Stratified Setting 314
Appendix A: Theory for the Case-Control Retrospective Setting 318
Appendix B: Theory for Exact Conditional Inference 320
Appendix C: ODS Macro 321

Chapter 11. Quantal Bioassay Analysis **323**
11.1 Introduction 325
11.2 Estimating Tolerance Distributions 325
11.3 Comparing Two Drugs 330
11.4 Analysis of Pain Study 339

Chapter 12. Poisson Regression **347**
12.1 Introduction 349
12.2 Methodology for Poisson Regression 349
12.3 Simple Poisson Counts Example 351
12.4 Poisson Regression for Incidence Densities 353
12.5 Overdispersion in Lower Respiratory Infection Example 356

Chapter 13. Weighted Least Squares **363**
13.1 Introduction 365
13.2 Weighted Least Squares Methodology 365
13.3 Using PROC CATMOD for Weighted Least Squares Analysis 371
13.4 Analysis of Means: Performing Contrast Tests 377
13.5 Analysis of Proportions: Occupational Data 386
13.6 Obstetrical Pain Data: Advanced Modeling of Means 395
13.7 Analysis of Survey Sample Data 409
13.8 Modeling Rank Measures of Association Statistics 418
Appendix A: Statistical Methodology for Weighted Least Squares 422

Chapter 14. Modeling Repeated Measurements Data with WLS **427**
14.1 Introduction 429
14.2 Weighted Least Squares 430
14.3 Advanced Topic: Further Weighted Least Squares Applications 453

Chapter 15. Generalized Estimating Equations **469**
15.1 Introduction 471
15.2 Methodology 471
15.3 Summary of the GEE Methodology 478
15.4 Passive Smoking Example 480
15.5 Crossover Example 487
15.6 Respiratory Data 494
15.7 Using a Modified Wald Statistic to Assess Model Effects 503
15.8 Diagnostic Data 505
15.9 Using GEE for Count Data 510
15.10 Fitting the Proportional Odds Model 514
15.11 GEE Analyses for Data with Missing Values 518
15.12 Alternating Logistic Regression 527
15.13 Using GEE to Fit a Partial Proportional Odds Model: Univariate Outcome 533
15.14 Using GEE to Account for Overdispersion: Univariate Outcome 541
Appendix A: Steps to Find the GEE Solution 547
Appendix B: Macro for Adjusted Wald Statistic 548

Chapter 16. Loglinear Models **551**
16.1 Introduction 553
16.2 Two-Way Contingency Tables 554
16.3 Three-Way Contingency Tables 564
16.4 Higher-Order Contingency Tables 574
16.5 Correspondence Between Logistic Models and Loglinear Models 585

Appendix A: Equivalence of the Loglinear and Poisson Regression Models . . . 588

Chapter 17. Categorized Time-to-Event Data **591**
17.1 Introduction 593
17.2 Life Table Estimation of Survival Rates 593
17.3 Mantel-Cox Test 596
17.4 Piecewise Exponential Models 599
