## **SAS/C Compiler fix for fmin and fmax Functions (Release 6.00.05) for Unix Platforms**

### **Installation Instructions**

1. To fix the problem with the builtin fmin and fmax functions, you need to install a portion of the SAS/C compiler. This compiler fix is one file (lc2) and is supplied as a compressed tar image. Uncompress and untar the image using:

```
uncompress filename.tar.Z  
tar -xf filename.tar
```

2. Now copy the lc2 file to your 6.00.05 installation directory or location. You may wish to rename the old lc2 file before copying the new file to your installation location.
