## CGI Tools for the Web Server 9.21

### Prerequisites

Platform	Install Space Required
Microsoft Windows	360 MB
Microsoft Windows for 64-Bit Itanium-based Systems	381 MB
Microsoft Windows for x64	360 MB
AIX	409 MB
HP-UX	409 MB
HP-UX for the Itanium Processor Family Architecture	446 MB
Linux for Intel Architecture	375 MB
Linux for x64	375 MB
Solaris	392 MB
Solaris for x64	386 MB
z/OS	XX MB

SAS/IntrNet users may need to install a Java Runtime Environment (JRE) on their client systems. A JRE is required on client systems only if your SAS/IntrNet applications use the SAS/GRAPH Java Applets. For the latest information about required JREs, please see the Third Party Software Reference Web site at

<http://support.sas.com/resources/thirdpartysupport/index.html>.

### Installing CGI Tools for the Web Server on Windows and UNIX

Before performing the following steps, Windows users should ensure they are logged in as an administrator. UNIX users should ensure they are logged in with an installer ID that is not root.

1. Unpack the download package to a location that is accessible from where you want to install the software. Do not put the download package in an existing SAS Software Depot or in the directory where you want to install. Doing so will cause the SAS Software Depot and SAS

Deployment Wizard to work incorrectly. You must put the download package in its own directory/folder.

2. To start the SAS Deployment Wizard, Windows users should double-click the `setup.exe` at the location the files have been unpacked in. UNIX users should execute `setup.sh`.
3. The **Choose Language** dialog opens. Choose the language in which you want to perform the installation of your downloaded software. Click **OK**.
4. The **Specify SAS Home** dialog opens. Enter the location you want to install your software in the text field, or use the **Browse** button to search for a location. When the correct location is in the text field, click **Next** to continue. Note that Windows users who have already installed SAS software using the SAS Deployment Wizard will not see this dialog.
5. The **Select Products to Install** dialog opens. Ensure the checkbox beside every product in the list is checked. If you click the **Info** icon, you will be directed to documentation about the software you have downloaded. The pertinent parts of that documentation are repeated in the "Prerequisites" section above.

When each checkbox has been checked, click **Next** to continue.

6. For hosts other than Windows, the **Select Java Runtime Environment** dialog opens. Choose to either install the recommended Java Runtime Environment and enter an install location, or select an existing Java Runtime Environment that will be used for the SAS software install. After making your selection, click **Next** to continue.
7. The **Deployment Summary** dialog opens. Click **Start** to begin the installation.
8. The **Deployment in Progress** dialog opens, indicating that the installation is taking place. When the installation is complete, click **Next**.
9. The **Additional Resources** dialog opens, listing a number of online resources should you run into difficulty. Use **Print** to make a copy of this information for future use. Click **Finish** to close the SAS Deployment Wizard.

## Installing CGI Tools for the Web Server on z/OS
