Overview

This document provides requirements for installing and running SAS 9.2 Foundation for Linux for Intel Architecture. You must update your system to meet the minimum requirements before running SAS 9.2 Foundation. The major requirements listed in the document are:

- Software Requirements
- Hardware Requirements
- Space Requirements
- Specific Product Requirements
- Graphics Hardware and Software Compatibility

Software Requirements

Operating System

SAS is supported on the following operating systems:

- Red Hat Enterprise Linux 4 and 5
- SuSE Linux Enterprise Server 9 and 10

In addition, SAS is also supported on the Linux x64 operating system via the 32-bit compatibility mode in Linux x64 environment.

If you use Red Hat Enterprise Linux version 4 or later, SAS requires the library `libXp.so` to be installed. If you are running Red Hat Enterprise Linux 4, this library can be found in the `xorg-x11-deprecated-libs` package. For Red Hat Enterprise Linux 5, this library can be found in the `libXp` package.

Basic Linux installs come with all the packages that SAS requires. Installations which specifically remove default packages in the base operating system (e.g., X11 libraries, system utilities, etc.) may experience problems.

The Unicode libraries shipped with SAS 9.2 on Linux platforms depend upon installation of a compatible standard C++ library, which is located in `/usr/lib/libstdc++.so.5` and/or `/usr/lib64/libstdc++.so.5`.

- For Red Hat Enterprise Linux 4, this is RPM package `compat-libstdc++-33-3.2.3-47.3`. For Red Hat Enterprise Linux 5, this is RPM package `compat-libstdc++-33-3.2.3-61`.
- For SuSE Linux Enterprise Server 9, this is RPM package `libstdc++-3.3.3-43.24`. For SuSE Linux Enterprise Server 10, this is RPM package `compat-libstdc++-5.0.7-22.2`.

Note: *The patch levels listed were correct at the time this document was printed. However, patches required for Linux for Intel Architecture are subject to unexpected change as development continues. To ensure you have the latest patch requirements, go to the Install Center Web page (<http://support.sas.com/installcenter>) to find the most recent updates to this System Requirements document.*

Web Browser

SAS 9.2 Foundation uses a new system, Remote Browsing, for displaying Web-based information. Instead of running a browser on the UNIX workstation, SAS 9.2 Foundation sends the URL to your desktop computer for display in a Web browser. This removes the browser overhead from the UNIX server. A small software agent named the Remote Browser Server is installed on your desktop computer to enable SAS to communicate with your browser. The process is illustrated below.

SAS creates a URL that references the information to be displayed (usually program help or ODS output), then sends the URL to the SAS Remote Browser Server on your desktop computer (step 1). The Remote Browser Server then sends a request to the browser to display a page (step 2). The browser then reconnects to SAS to retrieve the information to be displayed and displays it in the browser (step 3).

To use remote browsing, your desktop computer must be one of the following platforms, and have installed one of the supported browsers.

Platform	Supported Browser
Windows XP/Vista 32-bit	Firefox 2.0
	Internet Explorer 6 with SP2 or Internet Explorer 7
Linux	Firefox 2.0

The Remote Browser Server must be installed and running for SAS to display web information. The installer for the Remote Browser Server can be found on support.sas.com (<http://support.sas.com/documentation/configuration/thirdpartysupport/v92/thirdparty92.html>), or directly downloaded from a SAS session.

For SAS to be able to use your Web browser, the browser must be configured to allow pop-up windows. In addition, elements of SAS require access to the SAS Web site and third-party Web sites. Contact your sys admin to ensure that your browser is configured to access external sites.

- A compliant ODBC driver manager and ODBC driver (64-bit libraries)

ODBC drivers are often available from DBMS vendors and other third party ODBC driver developers. The ODBC driver you choose may require additional DBMS software in order to access the data.

You may have to edit the .odbc.ini file in your home directory with a text editor to configure data sources. Some ODBC driver vendors may allow a system administrator to maintain a centralized copy by setting an environment variable.

The ODBC drivers are ODBC API-compliant dynamic link libraries, referred to in UNIX as shared objects. You must include the full path to the dynamic link libraries in LD_LIBRARY_PATH so that the ODBC drivers can be loaded dynamically at run time.

For more information, please consult your ODBC driver vendor.

SAS/GRAPH software can generate encapsulated PostScript vector files, which can be exported to word processing packages such as Microsoft Word and WordPerfect. SAS/GRAPH software can also generate Windows metafiles that can be exported to numerous packages including Microsoft Office, Lotus Smart Suite, and Perfect Office. Contact SAS Technical Support for details.

SAS/GRAPH software's HPGL or HPGL2 driver can be used to produce files that can be transferred to most vector-based drawing programs such as CorelDraw and Micrografx Designer.

SAS/GRAPH software also has drivers for PDF and SVG along with image file formats of BMP, DIB, EMF, EPSI, PBM, PPM, GIF, JPEG, EMF, WMF, PNG, TIFF, and PaintBrush image formats. In addition, SAS/GRAPH software can import graphics in the following formats:
