  Terminals and Displays ............................................................................................... 10
  Interfaces with other Graphics Software ..................................................................... 10
  Requirements for ActiveX and Java Graphics .............................................................. 10
Note: If you are familiar with previous SAS releases, please note that the SAS/C Transient Library is no longer used and is not shipped with SAS 9.4.

This document provides requirements for installing and running SAS 9.4 Foundation under z/OS. You must update your system to meet the minimum requirements before running SAS 9.4 Foundation. The major requirements listed in the document are:

- Software Requirements on page 1.
- Hardware Requirements on page 3.
- Space Requirements on page 4.
- Specific Product Requirements on page 5.
- Graphics Hardware and Software Compatibility on page 10.

For additional information and to view the latest system requirements for your system, access the following web site:

http://support.sas.com/installcenter/

or contact SAS Institute Technical Support at http://support.sas.com/techsup/contact/.

Software Requirements

**Operating System**

z/OS, Version 1, Release 11, Version 2, or higher.

**UNIX System Services Requirements**

In SAS 9.4, each user needs an OMVS segment, either specifically defined or as a default for all user IDs, so that the user can be 'dubbed' in UNIX terms. End users do not require their own UNIX file system directory. The user completing the installation needs the ability to install Help content and other SAS 9.4 content into a UNIX file system (preferably zFS).

**Java Requirements**

Some features of SAS 9.4 require the use of a Java Software Development Kit (also referred to as an SDK) to function properly. The features are:

- SAS Deployment Wizard
- SAS Migration Utility
- SAS Deployment Manager
- SAS/GRAPH support for the javaimg device

  **Note:** Java is required when creating graphics output with ODS Graphics and the SAS 9G procedures (such as SGPLOT, SGSCATTER, SGRENDER, and SGPANEL).

- The SAS REPORT procedure

Please refer to the section entitled “Configuring SAS Software for Use with the Java Platform” in the Configuration Guide for SAS 9.4 Foundation for z/OS for configuration details.
If you are using any of these features, determine that you have at least the following **31-bit** version or release of the Software Development Kit: SDK 6.

This is the version of the SDK that SAS has tested and supports. Later patch-levels and versions of this SDK may work; however, they have not been tested by SAS.

You can check SAS’s third party support web page for information about the latest supported version of the SDK for z/OS at [http://support.sas.com/resources/thirdpartysupport/](http://support.sas.com/resources/thirdpartysupport/).

For information about Java Runtime Environment (JRE) requirements, please refer to the SAS 9.4 Support for Java Runtime Environments web page, located at [http://support.sas.com/resources/thirdpartysupport/v94/jres.html](http://support.sas.com/resources/thirdpartysupport/v94/jres.html).

**Web Browser**

SAS 9.4 Foundation uses Remote Browsing for displaying web-based information. Instead of running a browser within your SAS session, SAS 9.4 Foundation displays the information in an external browser running on your desktop computer. A small software agent named the Remote Browser Server is installed on your desktop computer to enable SAS to communicate with your browser. A sample process is illustrated below—the actual screens may be somewhat different at your site.

SAS creates a URL that references the information to be displayed (usually program help or ODS output), then sends the URL to the SAS Remote Browser Server on your desktop computer (step 1). The Remote Browser Server then sends a request to the browser to display a page (step 2). The browser then reconnects to SAS to retrieve the information to be displayed and displays it in the browser (step 3).
To use remote browsing, your desktop computer must be one of the following platforms, and have installed one of the supported browsers.

<table>
<thead>
<tr>
<th>Platform</th>
<th>Supported Browser</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows XP/Vista/7</td>
<td>Firefox 3.6 and higher (only the 32-bit version of the browser is supported)</td>
</tr>
<tr>
<td></td>
<td>Internet Explorer 7 or higher</td>
</tr>
<tr>
<td>Linux</td>
<td>Firefox 3.6 and higher (only the 32-bit version of the browser is supported)</td>
</tr>
</tbody>
</table>

The Remote Browser Server must be installed and running for SAS to display web information. The installer for the Remote Browser Server can be found at http://www.sas.com/apps/demosdownloads/setupintro.jsp, or directly downloaded from a SAS session.

For SAS to be able to use your web browser, the browser must be configured to allow pop-up windows.

**Hardware Requirements**

**Machines Supported**
- zSeries and System z machines

**Tape Drives Supported**
SAS uses standard operating system access methods to read/write tape files, and will operate with any tape drive that can be used by these access methods. This includes:
- IBM 3480 compatible drives
- IBM 3490 compatible drives
- IBM 3590 compatible drives
- IBM 3592 compatible drives (includes IBM TS1120 drives)

**Distribution Media**
- Electronic Software Delivery
- DVD
- Cartridge (3590 only)
Memory Requirements

The total memory required for a SAS session depends on the work being performed and SAS 9.4 Foundation options that are active. Most work, up to moderately large jobs, can be run in a region that provides 64 MB of storage above the line. This is recommended for both batch jobs and TSO sessions.

SAS 9.4 use of below-the-line storage is substantially less than was required for SAS 9.0. 4 MB of below-the-line storage should be adequate for most batch jobs and TSO sessions.

Programs that utilize AF and SCL program entries may require additional region size in SAS 9.4 to exploit the various functions of the product. Examples of SAS products which may require a larger region are SAS/ASSIST and SAS IT Resource Management. Refer to the “Specific Product Requirements” section for the recommended REGION size for these products.

Note: This may also be necessary for user-written AF and SCL programs. For these, the site must determine what an appropriate REGION is.

If you install the SAS bundles into the LPA, the region requirements for SAS jobs will be reduced, because less storage is needed in the region for SAS executable modules. Information regarding installation of LPA bundles can be found in the Configuration Guide for SAS 9.4 Foundation for z/OS.

No below-the-line storage is required for any of the LPA bundles.

Java Memory Requirements

SAS sessions that invoke the JAVA virtual machine will require a much larger region. The JVM will typically add approximately 250 MB to the region requirement.

Important: It is recommended that the logon user ID that will be running the SAS Deployment Wizard to install SAS 9.4 Foundation for z/OS have a region size or ASSIZEMAX of 1 GB. This accommodates both the Basic and Planned order type scenarios.

Space Requirements

The media you received is customized for your site and contains all of the SAS software products for which you are licensed.

Approximate space requirements for all of the products available for SAS 9.4 Foundation are:

- SAS Software Depot for all electronic download, DVD and tape planned orders (only needed during installation)
  - Base-only 8.2 GB
  - All products 24.1 GB
- Space for permanent installation
  - Traditional z/OS data sets 6529 * cylinders
  - UNIX file system space for SASHOME directory 3 GB (allows space for hot fixes and maintenance)

* This includes SAS/GRAPH map data sets from GfKGeoMarketing of 3855 cylinders disk space.
System Requirements for SAS 9.4 Foundation for z/OS

- Temporary space for Maintenance/Add-on (Actions B/C) during installation
  Traditional z/OS data sets require 1200 cylinders released back to the system

**Note:** SAS recommends a minimum of 100 MB of available \texttt{/tmp} space during installation and deployment.

After the installation of the SAS software is complete, any unused space will be released back to the system.

### Specific Product Requirements

#### Base SAS Software

**TCP/IP Access Method**

Some features of Base SAS software require TCP/IP; for example, Remote Help and the FTP access method. SAS requires either:

- A properly configured IBM z/OS TCP/IP.
- A third party TCP/IP package. This package must fully support the function and interfaces found in the minimum system requirements for z/OS.

**Requirements for SPD Engine on z/OS**

General guidelines for a minimum computer system to support SPD Engine include:

- UNIX file system (zFS)

#### SAS/ACCESS Interface to Adabas Software

Base SAS is required for the installation of SAS/ACCESS Interface to Adabas software.

**DBMS Products Required:**

- ADABAS, Release 6.2.1 or higher
- For SAS 9.4 M3: ADABAS, Release 7.4.1 or higher

**Optional DBMS Products**

- NATURAL, Release 2.3.2 or higher
- NATURAL Security, Release 2.3.2 or higher
- PREDICT, Release 3.4.1 or higher

#### SAS/ACCESS Interface to CA-Datacom/DB Software

Base SAS is required for the installation of SAS/ACCESS Interface to CA-Datacom/DB software.

**DBMS Products Required**

- CA-Datacom/DB, Release 9.0 or higher. For SAS 9.4 M3, Release 11 SP2 or higher.
- CA-DATADICTIIONARY, Release 9.0 or higher
SAS/ACCESS Interface to CA-IDMS Software

Base SAS is required for the installation of SAS/ACCESS Interface to CA-IDMS software.

DBMS Products Required:
- CA-IDMS, Release 14.0 or higher
- For SAS 9.4 M3, Release 16.0 or higher

SAS/ACCESS Interface to DB2 Software

Products Required
- Base SAS software
- SAS/ACCESS Interface to DB2 software

DBMS Products Required: DB2 Version 10 or higher

SAS/ACCESS Interface to IMS-DL/I Software

Base SAS is required for the installation of SAS/ACCESS Interface to IMS-DL/I software.

DBMS Products Required:
- IMS/VS, Version 6.1 or higher
- For SAS 9.4 M3, Version 7 or higher

SAS/ACCESS Interface to Oracle Software

Products Required
- Base SAS software
- SAS/ACCESS Interface to Oracle software

DBMS Products Required

SAS/ACCESS Interface to Oracle software can be installed on either a full Oracle RDBMS server node or on an Oracle client node.

The minimum required Oracle client release is: Oracle 10g.

SAS/ACCESS Interface to SYSTEM 2000 Software

Products Required
- Base SAS software
- SAS/ACCESS Interface to SYSTEM 2000 software

DBMS Products Required: SYSTEM 2000, Version 2.0 (current release), or Release 11.6 with Field Fix 1 or higher.
**SAS/ACCESS Interface to Teradata Software**

Base SAS is required for the installation of SAS/ACCESS Interface to Teradata software.

**DBMS Products Required**

- Teradata Database 12 or higher (Teradata Database 13.10 or higher if Temporal features are needed)
- Teradata CLIv2 client libraries TTU 12 or higher on the machine where you run SAS and SAS/ACCESS Interface to Teradata. TTU13.10 or higher if Temporal features are needed. CLIv2 is part of Teradata Tools and Utilities (TTU) software. If you are running any Teradata Utility (BTEQ, FastLoad, MultiLoad, FastExport, TPump), then CLIv2 is already on your machine.

**Note:** Connectivity from the z/OS client machine to the Teradata DBS server machine should be established and validated as described in the Teradata Tools and Utilities Installation Guide for MVS. If you are successfully accessing tables with BTEQ, FastLoad, or other Teradata utilities, you already have the needed connectivity.

**DBMS Products Required for SAS 9.4 M2 or Higher**

With the release of 9.4 M2, Teradata Database 14.10 or higher is required.

**SAS/ASSIST**

**Products Required:** Base SAS software

**Memory Requirements**

Due to the increased storage requirements for SAS 9 and above, it may be necessary to increase the default REGION to 64 MB.

**SAS/CONNECT Software**

**TCP/IP Access Method**

See “TCP/IP Access Method” in “Base SAS Requirements” on page 5 for details.

**Note:** If you are familiar with earlier SAS releases, please note that the SAS/C Transient Library is no longer used and is not shipped with SAS 9.4. The associated configuration options (such as CTRANSLOC) are accepted but ignored.

**Components Required**

- Version 9 SAS SVC Routine, except for Basic Telnet SAS/CONNECT Session.

**SAS/Genetics 12.1 Software**

Base SAS and SAS/GRAPH are required for the installation of SAS/Genetics software.
SAS/GIS Software

Products Required

- Base SAS software
- SAS/GIS software
- SAS/GRAPH software

Other products may be required depending on the application.

SAS High-Performance Forecasting 12.1 Software

Base SAS is required for the installation of SAS High-Performance Forecasting software.

SAS/IntrNet Software

SAS/IntrNet software consists of several components that may be installed independently. SAS/IntrNet Server software is installed on an existing SAS system and is included on SAS 9.4 media.

All SAS/IntrNet components require the use of TCP/IP. See “TCP/IP Access Method” in “Base SAS Requirements” on page 5 for details.

CGI Tools and Applications

Installation Notes

For a new installation of CGI Tools for the Web Server (CGI Tools), including an add-on installation, the SAS Foundation product is required to be selected. If CGI Tools is being installed as the only add-on product, we recommend using an Action C staged install. This is because the SAS Foundation product in the order will be installed again. The CGI Tools data content is only installed to the UNIX file system area, so in the case where CGI Tools is the only product being installed, the PROMOTE job does not have to run.

Application Dispatcher

Requires Base SAS software and SAS/IntrNet Server software. The Application Broker component of the Application Dispatcher must be installed on the same machine as the web server. Use of the Pool Services feature requires the installation of the z/OS Spawner.

htmSQL

Requires Base SAS software, SAS/SHARE software, and a SAS/IntrNet software license (SETINIT). The htmSQL component must be installed on a web server.

MDDB Report Viewer Application

Requires Base SAS software, SAS/GRAPH software, SAS/IntrNet software, and SAS OLAP Server software. The Application Dispatcher component must be installed and configured.
**Xplore Sample Web Application**

Requires Base SAS software and SAS/IntrNet Server software. The Application Dispatcher component must be installed and configured.

**Java Tools and Applications**

**SAS/CONNECT Driver for Java**

Requires Base SAS software, SAS/CONNECT software, SAS/IntrNet Server software, and a configured SAS/Connect spawner. SAS/SHARE software must also be installed if data services are used. The Java Tools package must be installed on a web server or client system.

**Tunnel Feature**

Must be installed on a web server running on a UNIX or Windows system.

**SAS/OR 12.1 Software**

The use of graphics in SAS/OR software requires a SAS/GRAPH license. Invoking the OPTLP, OPTMILP, OPTQP, and OPTMODEL procedures in distributed computing mode requires a SAS High-Performance Analytics license.

**SAS/SESSION Software**

Products Required

- CICS Transaction Server for z/OS version 3.1 or higher.

**SAS/SHARE Software**

Products Required: Base SAS software

Components Required

- Version 9 SAS SVC Routine
- Refer to “Chapter 1 — Setting Up SAS 9.4 Foundation” in the Configuration Guide for SAS 9.4 Foundation for z/OS for information on the Version 9 SAS SVC Routine

**TCP/IP Access Method**

See “TCP/IP Access Method” in “Base SAS Requirements” on page 5 for details.

*Note:* If you are familiar with previous SAS releases, please note that the SAS/C Transient Library is no longer used and is not shipped with SAS 9.4. The associated configuration options (such as CTRANSLOC) are accepted but ignored.
Security System

A security system is required for z/OS SAS/SHARE sites making use of the cross-host or cross-architecture capabilities available in Release 8.2 and beyond. This requirement may be met by any of the following:

- IBM Security Server for z/OS
- Any Security system that provides support equivalent to these servers via the SAF system interface

SAS Studio Software

User Address Space

SAS recommends that you set the user address space maximum (ASSIZEMAX) to an address storage size large enough to allow the Java JVM to load and the SAS programs to properly execute.

Set the ASSIZEMAX variable for the user address space in the OMVS shell.

Graphics Hardware and Software Compatibility

Terminals and Displays

SAS/GRAPH software supports standard IBM graphics terminals (such as the IBM 3179G, IBM 3192G, and IBM 3472G terminals).

SAS/GRAPH software should also be able to support most 3270 emulation packages as long as the 3270 emulation software is configured to provide host graphics support.

Interfaces with other Graphics Software

SAS/GRAPH software provides device drivers to create output in various graphics file formats, such as PNG, GIF, JPEG, TIFF, RTF, PDF, CGM, and PostScript.

Please refer to the following web site for several z/OS-specific SAS/GRAPH examples:

Requirements for ActiveX and Java Graphics

The ActiveX and Java device drivers allow you to create HTML pages from within SAS 9.4 Foundation. Before you can do this, please verify that:

- Your system meets the JDK requirements (see “Java Requirements” on page 1).
- Your job or TSO session has sufficient memory to invoke Java.

For a list of supported browsers, refer to the System Requirements documentation for your client system.
SAS is the leader in business analytics software and services, and the largest independent vendor in the business intelligence market. Through innovative solutions, SAS helps customers at more than 70,000 sites improve performance and deliver value by making better decisions faster. Since 1976 SAS has been giving customers around the world THE POWER TO KNOW®.
