Overview

This document provides requirements for installing and running SAS 9.2 Foundation for Solaris. You must update your system to meet the minimum requirements before running SAS 9.2 Foundation.

The major requirements listed in the document are:

- Software Requirements
- Hardware Requirements
- Space Requirements
- Specific Product Requirements
- Graphics Hardware and Software Compatibility

Software Requirements

Operating System

SAS is supported on Solaris 10 1/06 and higher. To determine which Solaris release you are running, look at the `/etc/release` file using the `% cat /etc/release` command. Your result should look something like this:

```
Solaris 10 1/06 s10x_u1wos_19a X86
Copyright 2005 Sun Microsystems, Inc. All Rights Reserved.
Use is subject to license terms.
Assembled 07 December 2005
```

Ensure that the first line includes a value of “Solaris 10 1/06” or higher.

If you use Solaris 10 06/06, SAS for Solaris x64 will receive errors upon initialization in display manager mode unless patch 119281-06 has been installed. In addition, if you are using LDAP for authentication, you will also need 120037-09 or higher. The patches are available from the Sun vendor site.

SAS recommends that you apply the latest Sun Recommended Solaris Patch Cluster for x64 Solaris 10 to your Solaris 10 installation.

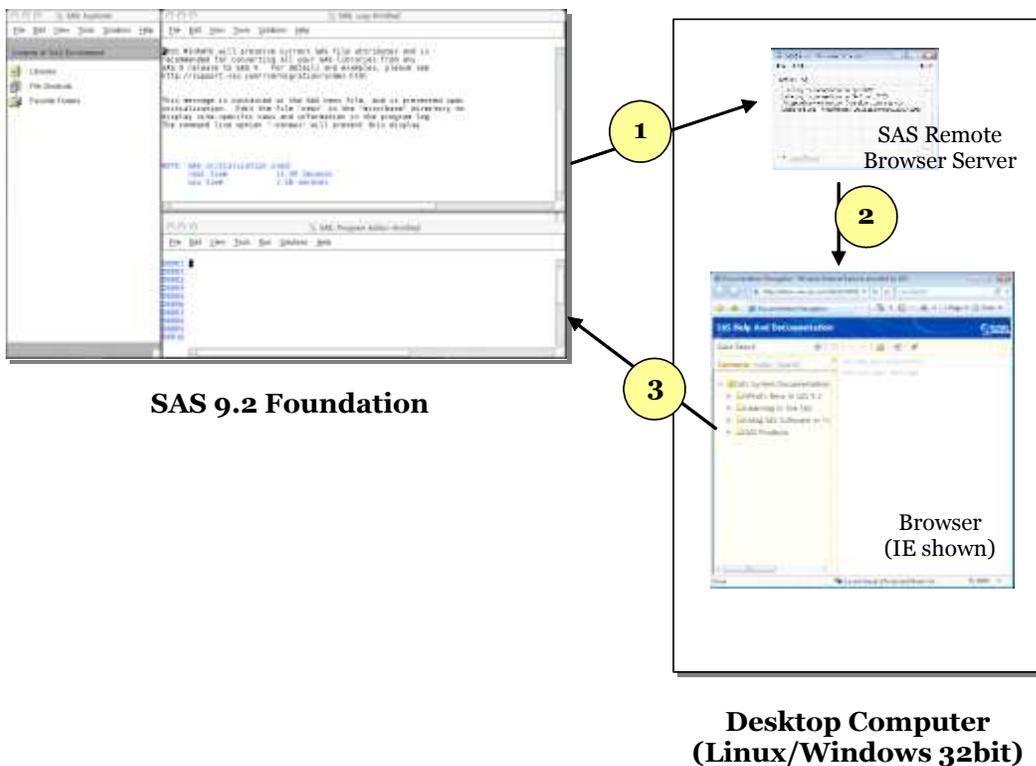

Note: *The patch levels listed were correct at the time this document was printed. However, patches required for Solaris are subject to unexpected change as development continues. To ensure you have the latest patch requirements, go to the Install Center Web page (<http://support.sas.com/installcenter>) to find the most recent updates to this System Requirements document.*

SAS requires the filesystems that SAS is installed on to have the `setuid` mount option enabled because `sasauth`, `sasperm`, and `elssrv` need it at SAS runtime.

Web Browser

SAS 9.2 Foundation uses a new system, Remote Browsing, for displaying Web-based information. Instead of running a browser on the UNIX workstation, SAS 9.2 Foundation sends the URL to your desktop computer for display in a Web browser. This removes the browser overhead from the UNIX server. A small software agent named the Remote Browser Server is installed on your desktop computer to enable SAS to communicate with your browser. The process is illustrated below.

SAS creates a URL that references the information to be displayed (usually program help or ODS output), then sends the URL to the SAS Remote Browser Server on your desktop computer (step 1). The Remote Browser Server then sends a request to the browser to display a page (step 2). The browser then reconnects to SAS to retrieve the information to be displayed and displays it in the browser (step 3).

To use remote browsing, your desktop computer must be one of the following platforms, and have installed one of the supported browsers.

Platform	Supported Browser
Windows XP/Vista 32-bit	Firefox 3.0.6
	Internet Explorer 6 with SP2 or Internet Explorer 7
Linux	Firefox 3.0.6

The Remote Browser Server must be installed and running for SAS to display web information. The installer for the Remote Browser Server can be found on support.sas.com (<http://support.sas.com/documentation/configuration/thirdpartysupport/v92/thirdparty92.html>), or directly downloaded from a SAS session.

For SAS to be able to use your Web browser, the browser must be configured to allow pop-up windows.

Hardware Requirements

Machines Supported

- All models that support Solaris 10 for x64
- Intel processors with Intel 64 support or AMD processors with AMD64 support

Distribution Media

- Electronic Software Delivery
- DVD

Memory Requirements

For general SAS activities (for example, query and reporting, simple statistics, data manipulation), we recommend 96 MB per user.

More memory is needed for memory-intensive tasks such as OLAP, data mining, heavy statistical analysis, multivariate analysis, formats, and any GUI-based applications. Please see the Specific Products Requirements section for more details on memory requirements for specific products.

Supported Displays

- Any X11-based display server. Monitors must support a minimum of 256 colors (PseudoColor).

Space Requirements

The following list contains space requirements in MB for all of the products available with this release of SAS 9.2 Foundation for Solaris. Use this information to help you determine how much free disk space you must have available before you can install SAS 9.2 Foundation. In addition, SAS 9.2 Foundation requires approximately 30 MB of disk space on the /tmp partition to complete the installation.
