

The SAS[®] System Release 8.2 (TS2M0) ABI+ for Intel[®] Architecture

Please Read Before Beginning Installation

Introduction

Alert Notes list problems that you need to be aware of before installing or using this software. Fixes and/or workarounds may be provided for the problems. Should you need assistance with the software, we ask that only the SAS Installation Representative or SAS Support Consultant call our Technical Support Division. Sites in the U.S. and Canada may call (919) 677-8008. Other sites should contact their SAS Installation Representative or SAS Support Consultant for the nearest SAS Institute office.

Installation and General SAS System Issues

- Alert Notes about Installation and General SAS System Issues are the only Alert Notes included in this document. For product-specific Alert Notes, please visit the following Web site:

http://www.sas.com/service/techsup/search/alert_search.html

On this Web page, choose the appropriate Operating System, Release, and how to sort your results.

- After your initial query of Alert Notes from the Web site listed above, it is essential that one or more representatives at your site subscribe to TSNEWS-L in order to receive future Alert Notes concerning your software. By subscribing, we will automatically email you with any new Alert Notes, removing the need for frequent visits to the Web site.

To subscribe through email, send e-mail to LISTSERV@VM.SAS.COM. The body of the e-mail should read SUBSCRIBE TSNEWS-L.

To subscribe through Technical Support's Web site, complete the Web form located at:

<http://www.sas.com/service/techsup/news/tsnews.html>

- The SAS System must be installed into an empty directory or a core dump will result. Specifically, the following error may occur:

Segmentation Fault - core dumped

This requirement is documented in the “Installation Requirements” section of the *Installation Instructions and System Administrator’s Guide for Release 8.2 (TS2M0) of the SAS System under UNIX Environments*.

SAS Note SN-004666 documents this problem.

- You should not launch the SASSETUP installation utility while in the directory that serves as the CD-ROM device mount point. As the installation progresses, you will be unmounting and mounting additional media. Attempting to unmount a file system that contains your current working directory will cause the `umount` command to fail with a `Device busy` message.

Instead, take the following steps:

Make a note of the `mount` command used to mount the CD-ROM device. For example, if the following command is used to mount the CD-ROM device:

```
mount /dev/dsk/c0t4d0 /cdrom
```

then the CD-ROM is being mounted to the `/cdrom` directory. Then, `cd` to your home directory or any directory other than the `/cdrom` directory to issue the SASSETUP command.

SAS Note SN-004461 documents this problem.
