

Scalable Performance Data Server™ Software Media Instructions, Release 2.2 (TS010) for Solaris® 2

Distribution is in the form of a tar tape/file. You must first restore the tar tape/file into a desired install directory on the SPD Server machine. It is recommended that you make a separate directory on the UNIX file system where you plan to install the software and restore it into that directory to keep the files in the distribution separate from other software packages and system files on your machine. For example, you may want to create a directory called `spds2_2` that you will use to install Release 2.2 (TS010). In the remainder of this document, the fully qualified path to this directory will be referred to as `InstallDir`.

For **tape distribution**, use the following commands:

```
cd InstallDir
tar -xvf /dev/rmt/tape_device
```

Tape distribution is available on 4mm and 8mm tapes. No extra recording characteristics (density, compression, and so on) are specified when the tapes are created. Commonly your `tape_device` will be unit 0. If you have multiple tape devices connected to your system, you will have to determine which unit number to specify. Assuming unit 0, your command sequence would be as follows:

```
cd InstallDir
tar -xvf /dev/rmt/0
```

For **CDROM distribution**, use the following commands after you have mounted the CD-ROM:

```
cd InstallDir
tar -xvf /cdrom_mount_point/spds.tar
```

where `/cdrom_mount_point` can be obtained by issuing a `df -k` command.

Once you have the tar tape/file unpacked into the `InstallDir`, you should examine the *Scalable Performance Data Server Installation Guide* (`install-unix.html`). You will find this document online in the `InstallDir /doc` directory. This document will guide you through the remainder of the installation process and provide valuable information for the SPD Server administrator as well.

The installation guide includes a packing list for the product. It includes detailed instructions for completing the server-side installation and configuration, as well as the SAS client-side installation and configuration. It also refers you to additional online documentation for the product.

For documentation of enhancements and compatibility issues, see the *Scalable Performance Data Server Product Notes* (`prod-notes.html`).

Government Notice

Reviewing the Federal Government Rights Notice

If your installation is a Federal Government site or a Federal Government Prime Contractor site, you are responsible for the information contained in a usage rights notice that has been included during the installation.

Processing the Government Rights Notice

Note: This task is required.

Review the Government Rights Notice information that is contained in the `InstallDir/govnote.txt` file.
