

Applying the SAS® System SETINIT on CMS

In order to run each software product that you license from SAS Institute, you must apply the SETINIT information. The SETINIT information contains current information about your licensing agreement with the Institute. SAS software will not run without up-to-date SETINIT information. You must update your SETINIT information whenever you renew your license or add new products.

Any change requests for your license parameters may either be called in or submitted in writing on your company's official stationery to our Customer Service Department. These requests include changing the serial number or CPU model specification when you change your hardware.

Note: Only the authorized SAS representative should change the SETINIT information. You designated the SAS representative when you licensed the SAS System.

Renewal SETINITs for the SAS System in the CMS Environment

If the license for your currently installed SAS System expires, you must execute a PROC SETINIT step to initialize or re-initialize the SAS System. To renew your license for the SAS System from a paper SETINIT, complete the following steps:

1. Copy SETNAME SAS, which contains the original SETINIT information, to a file called SETNAME SASO for backup purposes.

Note: SETNAME SAS is located on your SAS system disk.

2. Update the SETNAME SAS file with any new values from the paper SETINIT. **Be sure that the file matches the information on the paper, character-for-character.** Save the new file.
3. Execute the program in the new file by entering the SAS command shown below. You must have write access to the SAS System disk when applying a new SETINIT.

```
SAS SETNAME(SETINIT
```

This command writes a file called SETNAME SASLOG to the same disk that contains the SETNAME SAS file or the first R/W minidisk. You should see the following message in the SASLOG when the SETINIT has been applied successfully:

```
Note: Siteinfo data have been updated.
```

If you find any error messages, verify the information in the SETNAME SAS file and re-execute as previously described.

SETINIT Information for New Products

If additional products are licensed from SAS Institute after the initial installation of the SAS System, you will receive an add-on products tape.

Update your current SAS System license by running the SETINIT included on the new product tape. The SETINIT information is in a file called SETNAME SAS, which was loaded to disk from the tape. Execute the program by entering the following SAS command:

```
SAS SETNAME (SETINIT
```

A file named SETNAME SASLOG is written to your disk. You should see the following message in the SAS log when the SETINIT has been applied successfully:

```
Note: SITEINFO data have been updated.
```

For More Information

If you need more information about applying your SETINIT, refer to *SAS Companion for the CMS Environment, Version 6, First Edition*.

If you have questions about your SETINIT data, please call our Customer Service Department at (919) 677-8003 between 9:00 a.m. and 8:00 p.m. Eastern Standard Time.

If you encounter problems applying your SETINIT, please call our Technical Support Division at (919) 677-8008 between 9:00 a.m. and 8:00 p.m. Eastern Standard Time. Ask the Technical Receptionist for a CMS consultant. Please have your site number ready when you call.
