

## SAS<sup>®</sup> IT Resource Management 2.7

This Road Map briefly describes the media contained in your SAS IT Resource Management package and how to proceed to install the software.

### Description of Your Packages

Your SAS IT Resource Management software comes in as many as two binders. Each binder represents a distinct functional area of your SAS IT Resource Management solution and should be installed on a separate machine:

- SAS IT Resource Management Server
- SAS IT Resource Management Client

### How to Proceed

Be sure to terminate all non-essential applications before proceeding with the installation of any CD. Disable any anti-virus software that may be running.

#### **Step 1: Install and configure the installation kit containing SAS IT Resource Management Server.**

- ❑ Using the product listing on the spine of your installation kit(s), identify the installation kit that contains SAS IT Resource Management Server.
- ❑ Read and complete all of the steps in the *Basic Getting Started Guide*. If your installation kit has a *Getting Started* division, the *Basic Getting Started Guide* is located there. Otherwise, the *Basic Getting Started Guide* may be found by using the following path on the **Documentation for Installing and Configuring SAS CD** (located in the “801 Deployment Tools Media” section of your installation kit): <the host you are installing on>→**Basic Installation Edition Kit**→**Basic Getting Started Guide** (in the *Getting Started* section).

**Note:** *If this installation is on the z/OS platform, then the Merrill's Expanded Guide to CPE, MXG is included with this installation. Instructions for its installation are included with the information for SAS IT Resource Management.*

**Note:** *If this is a new SAS IT Resource Management installation (rather than an upgrade) on a Windows system, then the NTSMF product CD is included with this installation. The NTSMF product CD is for Windows 32-bit systems. If you are planning to install Demand Technology's NTSMF product on Windows 64-bit systems, you will need to contact Demand Technology (at <http://www.demandtech.com/>) and request access to a download site that is available from this manufacturer.*

## **Step 2: Install and configure the installation kit containing SAS IT Resource Management Client.**

**Note:** *If SAS IT Resource Management Client was included in the SAS IT Resource Management Server installation kit, then this installation should be complete. Otherwise, continue with this step.*
