What's New in DataFlux Secure 2.3 and 2.4

Introduction

The DataFlux Secure software received the following enhancements in the 2.4 release:

- Support for new platform software packages.
- Add a password encryption facility.

In the 2.3 release, the DataFlux Secure Software received support that enabled compliance with the Federation Information Processing Standard (FIPS).

To learn more about the DataFlux Secure software, see the *DataFlux Authentication Server Administrator's Guide*.

DataFlux Secure Now Available on New Platform Components

The DataFlux Secure software is now delivered in separate packages for DataFlux Web Studio, DataFlux Web Studio Server, and DataFlux Federation Server Manager.

Encrypt Passwords for Disk Storage

You can now encrypt passwords manually when you need to manually add a password to a file. Manual password entry can be required in configuration files or data source definitions. Passwords are always encrypted when they are entered into any platform user interface.

FIPS Compliance

You can now enable your DataFlux Data Management Platform to be compliant with FIPS 140-2. FIPS compliance is required in a variety of industrial and governmental applications. FIPS compliance is implemented on the DataFlux Federation Server, DataFlux Authentication Server, DataFlux drivers for ODBC and JDBC, and the DataFlux Federation Server Manager.
