Pre-Installation Tasks

All Operating Systems Administration Tasks

Create a SAS Forecast Studio Administration User

In order to perform some installation and configuration tasks, you need to create a SAS Forecast Studio administration user or grant administrative permissions to an existing user in SAS Metadata Server.

Note: You can change the installation's home directory or grant Write permissions for the SAS Forecast Studio administrator to the installation home directory by following the instructions found in the SAS Intelligence Platform documentation set at the following Web address:

<http://support.sas.com/onlinedoc/913/docMainpage.jsp>

Note: Do NOT use the SAS Administrator *sasadm* account.

Define a SAS Forecast Studio User Group

Different users have different operating system privileges on the SAS Workspace Server. By defining user groups, you can grant permissions to all of the SAS Forecast Studio users who log on to the metadata server as members of the group with the same credentials.

For a more secure deployment, you can create a SAS Forecast Studio user group, and ensure that the group contains all of the SAS Forecast Studio users. You must include any user who runs code in the batch mode as part of the group. Also, the group should be the primary group.

SAS Forecast Studio users must have Read, Write, and Execute access on the `.../SAS/ForecastStudio/` directory. The exact details of how to do this varies according to which operating system groups are defined and how restrictive you want your security to be.

Your Turn
