SAS IT Resource Management

Demand Technology Performance Sentry

Demand Technology Performance Sentry Data Collection Sets

Demand Technology Performance Sentry (formerly, NTSMF) logs performance data based on data collection sets that specify what data elements to collect and how frequently to collect them.

The Demand Technology Performance Sentry Administration version 4 application provides all the needed detail for the various data collection sets. The objects and counters can be viewed in this application. It is also possible to customize data collection sets. For additional information about these data collection sets see the Demand Technology Performance Sentry (NTSMF) User Guide for version 4 and refer to the Collection Sets appendix. This document is available at http://demandtech.com/ in the Downloads section under Product Documentation.

When using prior versions of Demand Technology Performance Sentry, the data collection sets for ITRM Windows Server and ITRM Exchange are available below. These data collection sets correspond to the SAS IT Resource Management aggregations for the Demand Technology Performance Sentry adapter. You can use these data collection sets and modify them as needed for your business requirements. For instructions about how to use data collection sets for Demand Technology Performance Sentry data, see the "Accessing Raw Data for Demand Technology Performance Sentry" topic in Appendix 2, "Data Sources Supported by SAS IT Resource Management Adapters," in the SAS IT Resource Management Administrator's Guide.

ITRM Windows Server

The Default Collection Set provided with Demand Technology Performance Sentry version 4 should be used for the ITRM Windows Server domain.

For prior versions of Demand Technology Performance Sentry, the ITRM Windows Server data collection set for Demand Technology Performance Sentry [ZIP] specifies the Windows Server data elements to collect and how frequently to collect them. This data collection set corresponds to aggregations and reports for SAS IT Resource Management 3.1 and later. For more information about the objects and counters that are included in this data collection set as well as the specific parameter settings for this data collection set, see the corresponding text file [TXT].

ITRM Exchange

The Exchange Server Starter Set provided with Demand Technology Performance Sentry version 4 should be used for the ITRM Exchange domain.

For prior versions of Demand Technology Performance Sentry, the ITRM Exchange data collection set for Demand Technology Performance Sentry [ZIP] specifies the Exchange data elements to collect and how frequently to collect them. This data collection set corresponds to aggregations and reports for SAS IT Resource Management 3.1 and later. For more information about the objects and counters that are included in this data collection set, as well as the specific parameter settings for this data collection set, see the corresponding text file [TXT].
