What's New in SAS Text Miner 13.1

Overview

SAS Text Miner 13.1 includes a new node, the **Text Profile** node, as well as enhancements to node performance and results.

For more information, see <http://support.sas.com/software/products/txtminer>.

New Text Profile Node

The **Text Profile** node enables you to profile a target variable using terms found in the documents. As a special case of this, a target time variable can be used to display how terms change over time. For more information about the **Text Profile** node, see Overview of the Text Profile Node in the SAS Text Miner Help.

Enhancements to Text Mining Nodes

The **Text Parsing** node contains a new **Select Languages** property, which enables you to specify the languages to keep in the document collection. The results for the **Text Topic** node contain a new **Terms** table, and a new **Topic Terms** matrix graph. The **Terms** table shows terms and their weights for each topic, and the **Topic Terms** matrix graph shows the topic values across terms.

For more information about the **Text Parsing** node, see Overview of the Text Parsing Node in the SAS Text Miner Help. For more information about the **Text Topic** node, see Overview of the Text Topic Node in the SAS Text Miner Help.
