Release Notes for SAS® Fraud Management 3.2_M2, Hot Fix 15

Description	Component	Summary	Test Scenario
This hot fix provides the ability to export all rules even when none of the rules are selected on the **Rules** Tab.	Rules	The current release does not enable you to select multiple rules simultaneously when you choose rules to export. The hot fix enables you to select and export all rules simultaneously.	While you display rules from the **Coding**, **Testing**, or **Production** folders in SAS® Rules Studio, click the **Export** button but do not select any rules. The application prompts you as to whether you mean to select all rules. If you click **OK**, all of the rules in the current folder, including dependencies, are exported. If you click **CANCEL**, a message dialog box appears, stating that you must select at least one rule to export.
