

Release Notes for SAS® Fraud Management 4.1_M0, Hot Fix 7

Description	Component	Summary	Test Scenario
The END_BUILD_ID column in the FRH_USER_VARIABLE_DIM database table is not updated by the 4019 job.	ETL	After a user variable is deleted from the system and a new rule package is deployed, the build number is stored for the deleted variable. However, the 4019 job does not properly update the END_BUILD_ID value for the variable in the FRH_USER_VARIABLE_DIM table.	After you apply the hot fix, the 4019 job properly sets the END_BUIILD_ID column in the FRH_USER_VARIABLE_DIM database table.
