

Release Notes for SAS® Fraud Management 4.1_M0, Hot Fix 15

Description	Component	Summary and Business Impact	Test Scenario
<p>Setting the SASFM.disableLookupListCounts property to true prevents the scoring engines from restarting.</p>	<p>RULES</p>	<p>Summary: In release 4.1M0, Hot Fix13, a new Java virtual machine (JVM) option, SASFM.disableLookupListCounts, was added for the web application. If this option is set to true, the lookup lists that are used by rules are not included in the rule deployment file. An error like the following is written in the SAS log for each lookup list:</p> <pre style="margin-left: 40px;">ERROR: "lookup-list-name" is not a recognized OSE lookup list in multi-org "A"</pre> <p>Some rule code might also generate syntax errors like this one:</p> <pre style="margin-left: 40px;">ERROR 22-322: Syntax error, expecting one of the following: a name, a quoted string, a numeric constant, a datetime constant, a missing</pre> <p>The syntax errors prevent the scoring engine from starting properly.</p> <p>Business Impact: The scoring engines might not restart after a new rule file is deployed.</p>	<p>After you apply this hot fix, the scoring engines start successfully after new rules are deployed.</p>
