Using This Book vii

1 Regression Concepts 1

- 1.1 What Is Regression? 1
- 1.2 Statistical Background 13
- 1.3 Terminology and Notation 15
- 1.4 Regression with JMP 23

2 Regressions in JMP 25

- 2.1 Introduction 25
- 2.2 A Model with One Independent Variable 27
- 2.3 A Model with Several Independent Variables 32
- 2.4 Additional Results from Fit Model 36
- 2.5 Further Examination of Model Parameters 50
- 2.6 Plotting Observations 54
- 2.7 Predicting to a Different Set of Data 63
- 2.8 Exact Collinearity: Linear Dependency 67
- 2.9 Summary 70

3 Observations 73

- 3.1 Introduction 73
- 3.2 Outlier Detection 74
- 3.3 Specification Errors 91
- 3.4 Heterogeneous Variances 96
- 3.5 Summary 104

4 Collinearity: Detection and Remedial Measures 105

- 4.1 Introduction 105
- 4.2 Detecting Collinearity 107
- 4.3 Model Restructuring 115

4.4 Variable Selection 125

4.5 Summary 136

5 Polynomial and Smoothing Models 139

5.1 Introduction 139

5.2 Polynomial Models with One Independent Variable 140

5.3 Polynomial Models with Several Variables 151

5.4 Response Surface Plots 156

5.5 A Three-Factor Response Surface Experiment 158

5.6 Smoothing Data 167

5.7 Summary 173

6 Special Applications of Linear Models 175

6.1 Introduction 175

6.2 Errors in Both Variables 176

6.3 Multiplicative Models 181

6.4 Spline Models 191

6.5 Indicator Variables 195

6.6 Binary Response Variable: Logistic Regression 203

6.7 Summary 214

7 Nonlinear Models 215

7.1 Introduction 215

7.2 Estimating the Exponential Decay Model 216

7.3 Fitting a Growth Curve with the Nonlinear Platform 229

7.4 Summary 236

8 Regression with JMP Scripting Language 237

8.1 Introduction 237

8.2 Performing a Simple Regression 237

8.3 Regression Matrices 241

8.4 Collinearity Diagnostics 242

8.5 Summary 246
