

Contents

Preface xiii

Chapter 1 Gaining Knowledge with Design of Experiments 1

- 1.1 Introduction 2
- 1.2 The Process of Knowledge Acquisition 2
 - 1.2.1 Choosing the Experimental Method 5
 - 1.2.2 Analyzing the Results 5
 - 1.2.3 Progressively Acquiring Knowledge 5
- 1.3 Studying a Phenomenon 5
- 1.4 Terminology 6
 - 1.4.1 Factor Types 6
 - 1.4.2 Experimental Space 7
 - 1.4.3 Factor Domain 8
 - 1.4.4 Study Domain 9
- 1.5 Centered and Scaled Variables 11
- 1.6 Experimental Points 13
- 1.7 Design of Experiments 14
 - 1.7.1 Methodology of Designs without Constraints 14
 - 1.7.2 Methodology of Designs with Constraints 15
 - 1.7.3 The Response Surface 17
 - 1.7.4 The a priori Mathematical Model of the Response 18

Chapter 2 Your First Designed Experiment 21

- 2.1 Introduction 21
- 2.2 Example 1: Control Your Car's Gas Consumption 22
 - 2.2.1 Preparing the Designed Experiment 22
 - 2.2.2 Choosing the Design 24

- 2.2.3 Running the Experiment 27
- 2.2.4 Interpreting the Coefficients 28
- 2.2.5 Interpreting the Results 40

Chapter 3 A Three-Factor Designed Experiment 45

- 3.1 Introduction 45
- 3.2 Example 2: Gold Jewelry 46
 - 3.2.1 Preparing the Designed Experiment 46
 - 3.2.2 Choosing the Design 51
 - 3.2.3 Running the Experiment 53
 - 3.2.4 Interpreting the Results 54
 - 3.2.5 Study Conclusion 67

Chapter 4 Four-Factor Full-Factorial Experiments 69

- 4.1 Introduction 69
- 4.2 Example 3: The Galette des Rois 70
 - 4.2.1 Preparing the Designed Experiment 70
 - 4.2.2 Choosing the Design 73
 - 4.2.3 Running the Experiment 74
 - 4.2.4 Interpreting the Results 76
 - 4.2.5 Desirability Functions 83
 - 4.2.6 Study Conclusion 91

Chapter 5 Statistical Concepts for Designed Experiments 93

- 5.1 Introduction 94
- 5.2 Example 4: Lifespan of Disposable Cutting Tools 95
 - 5.2.1 Preparing the Designed Experiment 95
 - 5.2.2 Experimentation 97
 - 5.2.3 Interpreting the Results of the Calculations 98
 - 5.2.4 Statistical Concepts Used in DOE 99
 - 5.2.5 Factors and Influential Interactions 113

- 5.2.6 Analysis of Variance (ANOVA) 115
- 5.2.7 Application 119
- 5.2.8 Residual Analysis 125
- 5.2.9 Study Conclusion 126

Chapter 6 Fractional Factorial and Screening Designs 131

- 6.1 Introduction 132
- 6.2 Example 5: Measuring Tellurium Concentration 133
 - 6.2.1 Preparing the Designed Experiment 133
 - 6.2.2 Running the Experiment 135
 - 6.2.3 Interpreting the Results 136
- 6.3 Alias Theory 137
 - 6.3.1 Definition of Contrasts 138
 - 6.3.2 New Interpretation Hypotheses 140
- 6.4 Box Calculations 141
 - 6.4.1 Box Notation 141
 - 6.4.2 Operations on the Column of Signs 142
 - 6.4.3 Rules to Remember 144
- 6.5 Equivalence Relation 144
 - 6.5.1 Basic Design 144
 - 6.5.2 Equivalence Relation 146
- 6.6 Alias Generating Functions 147
 - 6.6.1 Alias Generating Function of the Upper Half Design 147
 - 6.6.2 Alias Generating Function of the Lower Half Design 148
 - 6.6.3 Reading Aliases in Software 149
- 6.7 Practical Construction of a Fractional Factorial Design 149
 - 6.7.1 2^3 Full Factorial Design 151
 - 6.7.2 2^{4-1} Fractional Factorial 152
 - 6.7.3 2^{5-2} Fractional Factorial 154
 - 6.7.4 2^{7-4} Fractional Factorial 156
- 6.8 Maximum Number of Factors from a Base Design 157

- 6.9 Aliasing Theory with the Tellurium Example 157
 - 6.9.1 Confounding in the Tellurium Example 158
 - 6.9.2 Application of the Interpretation Assumption to the Tellurium Example 158
 - 6.9.3 Study Conclusion 159

Chapter 7 Examples of Fractional Factorial Designs 161

- 7.1 Introduction 162
- 7.2 Example 6: Sulfonation 163
 - 7.2.1 Preparing the Designed Experiment 163
 - 7.2.2 Carrying Out the Experiment 165
 - 7.2.3 Interpreting the Results 166
 - 7.2.4 Study Conclusion 173
- 7.3 Example 7: Spectrofluorimetry 174
 - 7.3.1 Preparing the Designed Experiment 174
 - 7.3.2 Carrying Out the Experiment 180
 - 7.3.3 Interpreting the Results 180
 - 7.3.4 Building the Complementary Design 190
 - 7.3.5 Study Conclusion 196
- 7.4 Example 8: Potato Chips 198
 - 7.4.1 Preparing the Designed Experiment 198
 - 7.4.2 Carrying Out the Experiment 201
 - 7.4.3 Interpreting the Results 201
 - 7.4.4 Study Conclusion 204

Chapter 8 Trial Order and Blocking 205

- 8.1 Introduction 206
- 8.2 The Nature of Errors 207
 - 8.2.1 Blocking 208
 - 8.2.2 Anti-Drift Designs 209
 - 8.2.3 Random Variation 210
 - 8.2.4 Small Systematic Variations 211

8.3	Example 9: Penicillium Chrysogenum (Blocking Example)	212
8.3.1	Preparing the Designed Experiment	212
8.3.2	Constructing the Plan and Checking the Blocking Advantage	214
8.3.3	Carrying Out the Trials	217
8.3.4	Interpreting the Results	218
8.3.5	Study Conclusion	224
8.4	Example 10: Yates's Beans	225
8.4.1	Preparing the Designed Experiment	225
8.4.2	Running the Experiment	228
8.4.3	Interpreting the Results	230
8.4.4	Study Conclusion	232
8.5	Example 11: "The Crusher" (Example of an Anti-Drift Design)	233
8.5.1	Introduction	233
8.5.2	Preparing the Designed Experiment	236
8.5.3	Carrying Out the Trials	237
8.5.4	Interpreting the Results	238
8.5.5	Study Conclusion	241
8.6	Advantages and Dangers of Randomization	242

Chapter 9 Response Surface Designs 245

9.1	Introduction	247
9.2	Composite Designs	247
9.3	Box-Behnken Designs	249
9.4	Doehlert Designs	250
9.5	Example 12: The Foreman's Rectification (Example of a Composite Design)	255
9.5.1	Preparing the Designed Experiment	255
9.5.2	Responses and Objectives of the Study	256
9.5.3	Factors	257
9.5.4	Study Domain	257
9.5.5	Choosing the Design	257
9.6	Experimentation (Factorial Design)	258
9.7	Interpreting the Factorial Design Results	258

9.7.1	Verification of the Linear Model	259
9.7.2	Positions of Star Points	260
9.8	Second-Degree Complementary Design	262
9.9	Interpreting the Results	263
9.9.1	Modeling	263
9.9.2	Graphical Representation of the Results	264
9.9.3	Confirming the Results	268
9.10	Study Conclusion	268
9.11	Example 13: Soft Yogurt (Box-Behnken Design Example)	269
9.11.1	Preparing the Design Experiment	269
9.11.2	Factors	270
9.11.3	Study Domain	271
9.11.4	Responses	271
9.11.5	Choosing the Design	271
9.12	Experimentation	271
9.13	Interpreting the Design	272
9.13.1	Model	272
9.13.2	Interpreting the Results	274
9.14	Study Conclusions	276
9.15	Example 14: Insecticide (Example of a Doehlert Design)	277
9.15.1	Preparing the Designed Experiment	277
9.15.2	Factors and Study Domain	277
9.15.3	Responses	278
9.15.4	The Designed Experiment	278
9.16	Experimentation	278
9.17	Interpreting the Results	279
9.17.1	Calculating the Coefficients	279
9.17.2	Modeling	281
9.17.3	Residual Analysis	282
9.17.4	Graphical Representation of the Results	282
9.18	Study Conclusion	286

Chapter 10 Mixture Designs 287

- 10.1 Introduction 288
- 10.2 Fundamental Constraint of Mixtures 289
- 10.3 Geometric Representation of a Mixture 289
 - 10.3.1 Two-Component Mixtures 289
 - 10.3.2 Reading a Binary Mixture Plot 291
 - 10.3.3 Reading a Ternary Mixture Plot 293
 - 10.3.4 Four-Component Mixture 294
- 10.4 Classical Mixture Designs 295
 - 10.4.1 Simplex-Lattice Designs 295
 - 10.4.2 Simplex-Centroid Designs 297
 - 10.4.3 Augmented Simplex-Centroid Designs 298
- 10.5 Mixture Design Mathematical Models 299
 - 10.5.1 First-Degree Models 299
 - 10.5.2 Second-Degree Models 300
 - 10.5.3 Third-Degree Models 301
- 10.6 Example 15: Three Polymers 302
 - 10.6.1 Preparing the Designed Experiment 302
 - 10.6.2 Running the Experiment 303
 - 10.6.3 Interpreting the Results 304
 - 10.6.4 Study Conclusion 306

Chapter 11 The Concept of Optimal Designs 307

- 11.1 Introduction 308
- 11.2 Hotelling's Example 308
- 11.3 Weighing and Experimental Design 311
 - 11.3.1 Standard Method 312
 - 11.3.2 Hotelling's Method 313
- 11.4 Optimality 314
 - 11.4.1 Maximum Determinant (D -Optimal) Criterion 315
 - 11.4.2 Computing Optimal Designs 315
- 11.5 Optimal Designs with a Linear Model 319
- 11.6 When to Use Optimal Designs 322
- 11.7 Adaptability of Optimal Designs 323

11.8	Example 16: Developing a Fissure Detector	326
11.8.1	Preparing the Designed Experiment	326
11.8.2	Using a 2^3 Factorial with Center Points	327
11.8.3	Using a D -Optimal Design with Repetitions	330
11.9	Example 17: Pharmaceutical Tablets	333
11.9.1	Preparing the Designed Experiment	333
11.9.2	The Design	335
11.9.3	Running the Experiment	336
11.9.4	Analysis of the 28-Run Design	337
11.9.5	Study Conclusion	340
11.10	Example 18: Self-Tanning Cream (Rescuing a Bad Design)	343
11.10.1	Why a Design Can Be Bad	343
11.10.2	Preparing the Designed Experiment	344
11.10.3	Running the Experiment	345
11.10.4	Interpreting the Results	345
11.10.5	Study Conclusion	349

Chapter 12 Latin Squares and Similar Designs 351

12.1	Introduction	352
12.2	Example 19: Salaries and One Categorical Factor	353
12.2.1	Mathematical Model	353
12.2.2	Global Effect of a Factor	355
12.3	Example 19: Salaries and Two Categorical Factors	356
12.3.1	Preparing the Designed Experiment	356
12.3.2	Mathematical Model	357
12.3.3	Effect of the Factors	359
12.3.4	Analysis of Sums of Squares	361
12.3.5	Analysis of Variance	365
12.4	Latin Squares	365
12.5	Greco-Latin Squares	367
12.6	Youden Squares	368

- 12.7 Example 20: Penetrometry Study 370
 - 12.7.1 Preparing the Designed Experiment 370
 - 12.7.2 Running the Experiment 370
 - 12.7.3 Interpreting the Results 371
- 12.7 Study Conclusion 373

Chapter 13 Summary and Advice 375

- 13.1 Introduction 376
- 13.2 Choosing the Experimental Method 376
 - 13.2.1 Posing the Problem Well 376
 - 13.2.2 Preliminary Questions 378
 - 13.2.3 Choosing a Design 381
- 13.3 Running the Experiment 382
- 13.4 Interpreting the Results 382
 - 13.4.1 Critical Examination 382
 - 13.4.2 What to Do Next 384
- 13.5 Progressively Acquiring Knowledge 385
- 13.6 Recommendations 386
- 13.7 What Experiments Cannot Do 386

Chapter 14 Using JMP to Design Experiments 389

- 14.1 Introduction 390
- 14.2 Designing an Experiment 390
 - 14.2.1 Screening Designer (Classical Designs Only) 391
 - 14.2.2 Custom Designer (Classical and Other Optimal Designs) 393
- 14.3 The JMP Data Table 396
- 14.4 Choosing and Fitting a Model 398
 - 14.4.1 The Screening Designer 401
- 14.5 Examining and Analyzing Results 402
- 14.6 Principal Graphics and Analysis Reports 404
- 14.7 Transferring and Saving Analysis Results 406

Appendix A	Example Data Sources	409
Appendix B	Comparing Two Independent Means	413
Appendix C	Introduction to Matrix Calculations	415
