Paper 128-2009

Data Warehouse and SOA: Using Web Services in the Insurance Industry

Janus Mens, PricewaterhouseCoopers

ABSTRACT

In the insurance industry, you will often be faced with an intense use of complex calculations in the business intelligence (BI) environment. A commonly used approach is to duplicate the business rules into the solution. In a service-oriented architecture (SOA) it is by the use of Web services possible to leave all the business rules and complex calculation in the source system.
