The SAS® 9.2 Software Deployment: A Deployment Experience Your Mother Would Love

Alec Fernandez, SAS Institute Inc.

ABSTRACT

SAS® placed a tremendous amount of effort into simplifying and streamlining the installation and configuration experience for SAS® 9.2, and providing an enhanced deployment experience for large and small customers. Customers can choose to receive their SAS software electronically or via media, maintain reference copies in the SAS Software Depot, and use the flexible deployment wizard to install and configure the software.

The SAS 9.2 installation framework utilizes a wizard interface that will quickly and easily guide you through a configuration experience. Almost all steps have been automated, with options to distribute the task of installing the middle tier to a separate administrative team. At the completion of the automated deployment path, the platform for SAS Business Analytics software deployment is fully functional, secure, and expandable so that more product offerings can be added as customers' needs change or as new products and solutions become available.

This presentation will demonstrate that the new configuration framework delivers enough flexibility to handle a large majority of complex deployments through a wizard interface that your mother would love.
