### ABSTRACT

SAS® Data Integration Studio provides many features to help both data warehouse developers and data integration specialists carry out data-oriented processes more efficiently and with greater control and flexibility. A major focus of this release is to deliver new visualization features that incorporate support for debugging. Improvements have been made to nearly every transformation. Performance analysis and optimization capabilities have been enhanced through the use of integration with system monitoring facilities. Increased integration across the platform is another focus area that provides a better integrated user experience across the SAS® suite of products. Customers will find many reasons to upgrade to the latest version of SAS Data Integration Studio.
