Decision Management, Speed, and Agility

Ryan Schmiedl, SAS
Michael Ames, SAS
Wayne Thompson, SAS

ABSTRACT

Decision management systems are not passive; rather, they adapt to the needs of an organization, providing the agility needed to address ever-changing business circumstances. They close the loop between the backroom model building and integration with front room business decisions. They are the key to integration of predictive analytics into operational systems. In this session, we'll present the vision of the future of SAS® integrated decision management suite covering discovery, business rules, batch and real-time execution, as well as an integration of an enterprise service bus.
