

TS - 728

Migration error due to NULL values for default member in hierarchies

SAS FM 4.0 to 4.1 and SPM 2.0 to 2.1 migration issue

Issue:

Error occurs while running the migration program hist_indx.sas. Several of the columns in records that are being appended to the deflt_hier_member table could have NULL values that cause the append to fail. This error is the result of pre production releases that allowed hierarchies to be defined without a default member.

How to fix:

Place the updated hist_indx.sas in the following folder prior to performing the migration:

\\Program Files\SAS\SASSolutionsServices\1.1\DataTier\Update\Config\sas

Post .1 issues:
