Incorrect ETL Job definition

SAS FM 4.1 and SPM 2.1

Background:

- ETL job Load DDS APP_MEMBER_PROPERTY_MAP Table is incorrect

Issue:

- Too many columns entered in Business Key tab of the SCD Type 2 Loader.

How to fix:

1. Delete "app_member_property_map_x.sas7bdat" SAS dataset from the DDSData directory (ex. C:\SAS\SASSolutionsConfig\Lev1\Data\DDSData). This file will be created again when running the ETL job.
2. Select properties for SCD Type 2 Loader in ETL job.
3. Delete last column "PROPERTY_CD" on Business Key tab.
4. Rerun ETL job.
