Acknowledgments	xi
Using This Book.....	xiii
Chapter 1 Basic Concepts in Research and DATA Analysis.....	1
Introduction: A Common Language for Researchers	2
Steps to Follow When Conducting Research	2
Variables, Values, and Observations	5
Scales of Measurement	7
Basic Approaches to Research	9
Descriptive versus Inferential Statistical Analysis	12
Hypothesis Testing.....	13
Conclusion.....	19
Chapter 2 Introduction to SAS Programs, SAS Logs, and SAS Output	21
Introduction: What Is SAS?	22
Three Types of SAS Files	23
SAS Customer Support Center.....	28
Conclusion.....	28
Reference.....	28
Chapter 3 Data Input	29
Introduction: Inputting Questionnaire Data versus Other Types of Data.....	30
Entering Data: An Illustrative Example	31
Inputting Data Using the DATALINES Statement	35
Additional Guidelines	40
Inputting a Correlation or Covariance Matrix.....	48
Inputting Data Using the INFILE Statement Rather than the DATALINES Statement.....	53
Controlling the Output Size and Log Pages with the OPTIONS Statement	54
Conclusion.....	55
Reference.....	55

Chapter 4	Working with Variables and Observations in SAS Datasets	57
	Introduction: Manipulating, Subsetting, Concatenating, and Merging Data	58
	Placement of Data Manipulation and Data Subsetting Statements	59
	Data Manipulation	63
	Data Subsetting	74
	A More Comprehensive Example	79
	Concatenating and Merging Datasets.....	80
	Conclusion.....	87
Chapter 5	Exploring Data with PROC MEANS, PROC FREQ, PROC PRINT, and PROC UNIVARIATE	89
	Introduction: Why Perform Simple Descriptive Analyses?.....	90
	Example: An Abridged Volunteerism Survey	91
	Computing Descriptive Statistics with PROC MEANS	93
	Creating Frequency Tables with PROC FREQ	96
	Printing Raw Data with PROC PRINT.....	98
	Testing for Normality with PROC UNIVARIATE.....	99
	Conclusion.....	118
	References.....	118
Chapter 6	Measures of Bivariate Association	119
	Introduction: Significance Tests versus Measures of Association	120
	Choosing the Correct Statistic.....	121
	Pearson Correlations.....	125
	Spearman Correlations	140
	The Chi-Square Test of Independence	142
	Conclusion.....	153
	Assumptions Underlying the Tests.....	153
	References.....	154
Chapter 7	Assessing Scale Reliability with Coefficient Alpha	155
	Introduction: The Basics of Scale Reliability.....	156
	Coefficient Alpha	159
	Assessing Coefficient Alpha with PROC CORR.....	160
	Summarizing the Results	165
	Conclusion.....	166
	References.....	166

Chapter 8	<i>t</i> Tests: Independent Samples and Paired Samples	167
	Introduction: Two Types of <i>t</i> Tests.....	168
	The Independent-Samples <i>t</i> Test	169
	The Paired-Samples <i>t</i> Test	188
	Conclusion.....	207
	Assumptions Underlying the <i>t</i> Test	207
	References.....	208
Chapter 9	One-Way ANOVA with One Between-Subjects Factor.....	209
	Introduction: The Basics of One-Way ANOVA, Between-Subjects Design	210
	Example with Significant Differences between Experimental Conditions.....	214
	Example with Nonsignificant Differences between Experimental Conditions.....	227
	Understanding the Meaning of the <i>F</i> Statistic	232
	Using the LSMEANS Statement to Analyze Data from Unbalanced Designs	233
	Conclusion.....	235
	Assumptions Underlying One-Way ANOVA with One Between-Subjects Factor	235
	References.....	235
Chapter 10	Factorial ANOVA with Two Between-Subjects Factors	237
	Introduction to Factorial Designs	238
	Some Possible Results from a Factorial ANOVA.....	241
	Example with a Nonsignificant Interaction.....	248
	Example with a Significant Interaction	260
	Using the LSMEANS Statement to Analyze Data from Unbalanced Designs	275
	Conclusion.....	278
	Assumptions Underlying Factorial ANOVA with Two Between-Subjects Factors	278

Chapter 11 Multivariate Analysis of Variance (MANOVA) with One Between-Subjects Factor	279
Introduction: The Basics of Multivariate Analysis of Variance	280
Example with Significant Differences between Experimental Conditions	283
Example with Nonsignificant Differences between Experimental Conditions	294
Conclusion	296
Assumptions Underlying Multivariate ANOVA with One Between-Subjects Factor	296
References.....	297
Chapter 12 One-Way ANOVA with One Repeated-Measures Factor	299
Introduction: What Is a Repeated-Measures Design?	300
Example: Significant Differences in Investment Size across Time	302
Further Notes on Repeated-Measures Analyses.....	315
Conclusion.....	322
Assumptions Underlying the One-Way ANOVA with One Repeated-Measures Factor.....	322
References.....	324
Chapter 13 Factorial ANOVA with Repeated-Measures Factors and Between-Subjects Factors	325
Introduction: The Basics of Mixed-Design ANOVA	326
Some Possible Results from a Two-Way Mixed-Design ANOVA	331
Problems with the Mixed-Design ANOVA	336
Example with a Nonsignificant Interaction	336
Example with a Significant Interaction	349
Use of Other Post-Hoc Tests with the Repeated-Measures Variable.....	364
Conclusion.....	364
Assumptions Underlying Factorial ANOVA with Repeated-Measures Factors and Between-Subjects Factors	364
References.....	366
Chapter 14 Multiple Regression.....	367
Introduction: Answering Questions with Multiple Regression	368
Background: Predicting a Criterion Variable from Multiple Predictors	373
The Results of a Multiple Regression Analysis.....	381
Example: A Test of the Investment Model	400
Overview of the Analysis.....	401
Gathering and Entering Data	402

Computing Bivariate Correlations with PROC CORR.....	406
Estimating the Full Multiple Regression Equation with PROC REG.....	409
Computing Uniqueness Indices with PROC REG.....	415
Summarizing the Results in Tables	423
Getting the Big Picture.....	424
Formal Description of Results for a Paper.....	425
Conclusion: Learning More about Multiple Regression	426
Assumptions Underlying Multiple Regression.....	427
References.....	428
Chapter 15 Principal Component Analysis	429
Introduction: The Basics of Principal Component Analysis.....	430
Example: Analysis of the Prosocial Orientation Inventory	438
SAS Program and Output	441
Steps in Conducting Principal Component Analysis.....	449
An Example with Three Retained Components	468
Conclusion.....	481
Assumptions Underlying Principal Component Analysis	481
References.....	481
Appendix A Choosing the Correct Statistic	483
Introduction: Thinking about the Number and Scale of Your Variables	484
Guidelines for Choosing the Correct Statistic	486
Conclusion.....	490
Reference	490
Appendix B Datasets	491
Dataset from Chapter 7: Assessing Scale Reliability with Coefficient Alpha.....	492
Dataset from Chapter 14: Multiple Regression.....	493
Dataset from Chapter 15: Principal Component Analysis.....	494
Appendix C Critical Values of the F Distribution	495
Index	499
