Advanced Log-Linear Models Using SAS

Daniel Zelterman

Contents

Preface
Acknowledgments

1 Discrete Distributions
  1.1 Introduction
  1.2 The Binomial Distribution
  1.3 The Poisson Distribution
  1.4 The Multinomial Distribution
  1.5 Negative Binomial and Negative Multinomial Distributions

2 Basic Log-Linear Models and the GENMOD Procedure
  2.1 Introduction
  2.2 Log-Linear Models for a 2x2 Table
  2.3 Log-Linear Models in Higher Dimensions
  2.4 Residuals for Log-Linear Models
  2.5 Tests of Statistical Significance
  2.6 The Likelihood Function

3 Ordered Categorical Variables
  3.1 Introduction
  3.2 Log-Linear Models with One Ordered Category
  3.3 Two Cross-Classified Ordered Categories

4 Non-Rectangular Tables
  4.1 Introduction
  4.2 Independence in a Triangular Table
  4.3 Interactions in a Circular Table
  4.4 Bradley-Terry Model for Pairwise Comparisons

5 Poisson Regression
  5.1 Introduction
  5.2 Poisson Regression for Mortality Data
  5.3 Poisson Regression with Overdispersion

6 Finite Population Size Estimation
  6.1 Introduction
  6.2 A Small Example
  6.3 A Larger Number of Lists

7 Truncated Poisson Regression
  7.1 Introduction
  7.2 Mathematical Background
  7.3 Truncated Poisson Models with Covariates
  7.4 An Example with Overdispersion
  7.5 Diagnostics and Options

8 The Hypergeometric Distribution
  8.1 Introduction
  8.2 Derivation of the Distribution
  8.3 Extended Hypergoemetric Distribution
  8.4 Hypergeometric Regression
  8.5 Comparing Several 2x2 Tables

9 Sample Size Estimation and Power for Log-Linear Models
  9.1 Introduction
  9.2 Background Theory
  9.3 Power for a 2x2 Table
  9.4 Sample Size for an Interaction
  9.5 Power for a Known Sample Size

A The Output Delivery System

B Programming Statements for Generalized Linear Models

C Additional Readings
