Page Number	Item	Comment																					
40	Chapter 1, Chapter Quiz, Question 3	<p>The FROM clause should not have a semicolon at the end. The code should read as follows:</p> <pre>proc sql; _ _____       from certadv.size left join certadv.price       on size.address = price.address; quit;</pre>																					
91	Chapter 3, Chapter Quiz, Question 3	<p>The references to table1 and table2 should include the librefs and should read as follows:</p> <pre>proc sql;       select * from certadv.table1 left join certadv.table2       on table1.g3=table2.g3; quit;</pre>																					
92	Chapter 3, Chapter Quiz, Question 5	<p>SQL does not require that input data sets be sorted to merge them. However, when merging data through a DATA step, the input data sets must be sorted by the BY variable. To create the MERGED data set that is shown in the PROC PRINT output, the input data, certadv.table1 and certadv.table2, must first be sorted by the g3 variable. The code to create the MERGED data set that is referenced by the PROC PRINT step is as follows:</p> <pre>proc sort data=certadv.table1 out=table1;       by g3; run;  proc sort data=certadv.table2 out=table2;       by g3; run;  data merged; merge table1 table2; by g3; run;  proc print data=merged noobs; title 'Merged'; run;</pre> <p>In addition, the correct output from the PROC PRINT step is as follows:</p> <table border="1"> <thead> <tr> <th colspan="3">Merged</th> </tr> <tr> <th>G3</th> <th>Z</th> <th>R</th> </tr> </thead> <tbody> <tr> <td>46</td> <td>UI</td> <td>BC</td> </tr> <tr> <td>47</td> <td>BA</td> <td></td> </tr> <tr> <td>85</td> <td></td> <td>FL</td> </tr> <tr> <td>89</td> <td>FL</td> <td></td> </tr> <tr> <td>99</td> <td></td> <td>BA</td> </tr> </tbody> </table>	Merged			G3	Z	R	46	UI	BC	47	BA		85		FL	89	FL		99		BA

93	Chapter 3, Chapter Quiz, Question 5	<p>The correct answer is C, as indicated in the Chapter Quiz Answer Key. The code as shown on page 93 is correct. However, a more robust solution is to replace the G3 label with a column named G3, as follows:</p> <pre>proc sql;   title 'Merged';   select coalesce(a.g3, b.g3) as G3, z, r     from certadv.table1 as a       full join certadv.table2 as b         on a.g3 = b.g3    order by 1;   title; quit;</pre>																																																																																				
137	Chapter 5, Output 5.3	<p>The correct output is as follows:</p> <table border="1" data-bbox="678 695 1052 1808"> <thead> <tr> <th>EmpID</th> <th>JobCode</th> <th>DateOfBirth</th> </tr> </thead> <tbody> <tr><td>1574</td><td>FA2</td><td>01MAY1988</td></tr> <tr><td>1125</td><td>FA2</td><td>12NOV1976</td></tr> <tr><td>1475</td><td>FA2</td><td>19DEC1969</td></tr> <tr><td>1124</td><td>FA1</td><td>13JUL1966</td></tr> <tr><td>1422</td><td>FA1</td><td>08JUN1972</td></tr> <tr><td>1094</td><td>FA1</td><td>05APR1978</td></tr> <tr><td>1368</td><td>FA2</td><td>15JUN1969</td></tr> <tr><td>1411</td><td>FA2</td><td>31MAY1969</td></tr> <tr><td>1113</td><td>FA1</td><td>18JAN1976</td></tr> <tr><td>1441</td><td>FA2</td><td>23NOV1977</td></tr> <tr><td>1103</td><td>FA1</td><td>19FEB1976</td></tr> <tr><td>1477</td><td>FA2</td><td>25MAR1972</td></tr> <tr><td>1970</td><td>FA1</td><td>29SEP1972</td></tr> <tr><td>1424</td><td>FA2</td><td>08AUG1977</td></tr> <tr><td>1132</td><td>FA1</td><td>03JUN1980</td></tr> <tr><td>1413</td><td>FA2</td><td>20SEP1973</td></tr> <tr><td>1116</td><td>FA1</td><td>02OCT1977</td></tr> <tr><td>1555</td><td>FA2</td><td>20MAR1976</td></tr> <tr><td>1434</td><td>FA2</td><td>14JUL1970</td></tr> <tr><td>1414</td><td>FA1</td><td>28MAR1970</td></tr> <tr><td>1390</td><td>FA2</td><td>23FEB1973</td></tr> <tr><td>1425</td><td>FA1</td><td>31DEC1979</td></tr> <tr><td>1135</td><td>FA2</td><td>24SEP1968</td></tr> <tr><td>1415</td><td>FA2</td><td>12MAR1966</td></tr> <tr><td>1221</td><td>FA2</td><td>25SEP1975</td></tr> <tr><td>1130</td><td>FA1</td><td>19MAY1979</td></tr> <tr><td>1122</td><td>FA2</td><td>04MAY1971</td></tr> </tbody> </table>	EmpID	JobCode	DateOfBirth	1574	FA2	01MAY1988	1125	FA2	12NOV1976	1475	FA2	19DEC1969	1124	FA1	13JUL1966	1422	FA1	08JUN1972	1094	FA1	05APR1978	1368	FA2	15JUN1969	1411	FA2	31MAY1969	1113	FA1	18JAN1976	1441	FA2	23NOV1977	1103	FA1	19FEB1976	1477	FA2	25MAR1972	1970	FA1	29SEP1972	1424	FA2	08AUG1977	1132	FA1	03JUN1980	1413	FA2	20SEP1973	1116	FA1	02OCT1977	1555	FA2	20MAR1976	1434	FA2	14JUL1970	1414	FA1	28MAR1970	1390	FA2	23FEB1973	1425	FA1	31DEC1979	1135	FA2	24SEP1968	1415	FA2	12MAR1966	1221	FA2	25SEP1975	1130	FA1	19MAY1979	1122	FA2	04MAY1971

253	Chapter 9, Example: Using the %DO Statement	The PUTLOOP macro should read as follows: <pre> %macro putloop;   %local i;   %do i=1 %to &amp;sqlobs;     %put TEACH&amp;i is &amp;&amp;teach&amp;i;   %end; %mend; %putloop </pre>
254	Chapter 9, Example: Generating Complete Steps	The WHERE statement in the ROSTERS macro should end in a semicolon as follows: <pre> where Course_Number=&amp;class; </pre>
373	Chapter 16, Chapter Quiz Answer Keys, Chapter 1, Question 2	Correct Answer: B  Updated description: There are <i>three</i> statements, the PROC SQL statement, the SELECT statement, <i>and the QUIT statement</i> . The SELECT statement contains three clauses: the SELECT clause, the FROM clause, and the ORDER BY clause.
374	Chapter 16, Chapter Quiz Answer Keys, Chapter 1, Question 6	Delete "(optional)" from the explanation.
374	Chapter 16, Chapter Quiz Answer Keys, Chapter 1, Question 7	Correct Answer: C
374	Chapter 16, Chapter Quiz Answer Keys, Chapter 2, Question 5	Correct Answer: C
