

From *Multiple Time Series Modeling Using the SAS® VARMAX Procedure*. Full book available for purchase [here](#).

Contents

About This Book	ix
About the Author	xiii
Acknowledgment	xv
Chapter 1: Introduction	1
Introduction	1
Ordinary Regression Models	1
Regression Models in Time Series Analysis	2
Time Series Models	3
Which Time Series Features to Model	4
Parameterized Models for Time Series.....	4
Chapter 2: Regression Analysis for Time Series Data	7
Introduction	7
The Data Series	7
Durbin-Watson Test Using PROC REG.....	8
Definition of the Durbin-Watson Test Statistic.....	8
Procedure Output.....	9
Cochrane-Orcutt Estimation.....	10
Conclusion	12
Chapter 3: Regression Analysis with Autocorrelated Errors	13
Introduction	13
Correction of Standard Errors with PROC AUTOREG	13
Adjustment of Standard Deviations by the Newey-West Method	14
Cochrane-Orcutt Estimation Using PROC AUTOREG	15
Simultaneous Estimation Using PROC AUTOREG	16
Conclusion	18
Chapter 4: Regression Models for Differenced Series	19
Introduction	19
Regression Model for the Differenced Series	19
Regression Results	21
Inclusion of the Lagged Independent Variable.....	22
Reverted Regression	23
Inclusion of the Lagged Independent Variable in the Model	24
Two Lags of the Independent Variables	25
Inclusion of the Lagged Dependent Variable in the Regression.....	27
How to Interpret a Model with a Lagged Dependent Variable	28

Conclusions about the Models in Chapters 2, 3, and 4	28
Chapter 5: Tests for Differencing Time Series	29
Introduction	29
Stationarity.....	29
Unit Roots	30
Dickey-Fuller Tests for Unit Roots.....	30
Simple Applications of the Dickey-Fuller Test.....	32
Augmented Dickey-Fuller Tests for Milk Production	32
KPSS Unit Root Tests	33
An Application of the KPSS Unit Root Test.....	34
Seasonal Differencing	35
Conclusion	35
Chapter 6: Models for Univariate Time Series.....	37
Introduction	37
Autocorrelations.....	37
Autoregressive Models.....	38
Moving Average Models	39
ARIMA Models	40
Infinite-Order Representations	40
Multiplicative Seasonal ARIMA Models	41
Information Criteria.....	41
Use of SAS to Estimate Univariate ARIMA Models	42
Conclusion	42
Chapter 7: Use of the VARMAX Procedure to Model Univariate Series	43
Introduction	43
Wage-Price Time Series	43
PROC VARMAX Applied to the Wage Series.....	46
PROC VARMAX Applied to the Differenced Wage Series.....	46
Estimation of the AR(2) Model	47
Check of the Fit of the AR(2) Model	49
PROC VARMAX Applied to the Price Series	50
PROC VARMAX Applied to the Number of Cows Series	51
PROC VARMAX Applied to the Series of Milk Production.....	53
A Simple Moving Average Model of Order 1	54
Conclusion	56
Chapter 8: Models for Multivariate Time Series	57
Introduction	57
Multivariate Time Series	57
VARMAX Models.....	58
Infinite-Order Representations	59
Correlation Matrix at Lag 0	59
VARMAX Models	60
VARMAX Building in Practice	60

Conclusion	62
Chapter 9: Use of the VARMAX Procedure to Model Multivariate Series.....	63
Introduction	63
Use of PROC VARMAX to Model Multivariate Time Series	64
Dickey-Fuller Tests for Differenced Series	66
Selection of Model Orders.....	66
Fit of a Fourth-Order Autoregressive Model	67
Estimation for the Parameters	67
Restriction of Insignificant Model Parameters.....	68
Residual Autocorrelation in a VARMA(2,0) Model	70
Cross-Correlation Significance.....	70
Portmanteau Tests	70
Distribution of the Residuals in a VARMA(2,0) Model	71
Identification of Outliers	72
Use of a VARMA Model for Milk Production and the Number of Cows	74
Analysis of the Standardized Series	75
Correlation Matrix of the Error Terms.....	78
The Model Fit	78
Properties of the Fitted Model	79
Conclusion	80
Chapter 10: Exploration of the Output	81
Introduction	81
Roots of the Fitted Second-Order Autoregressive Model	81
Forecasts	82
Lag 0 Correlation of the Error Terms	83
The Infinite-Order Representations	84
Plots of the Impulse Response	85
Accumulated Effects.....	86
Effects of Orthogonal Shocks	88
Conclusion	90
Chapter 11: Causality Tests for the Danish Egg Market	91
Introduction	91
The Danish Egg Market	91
Formulation of the VARMA Model for the Egg Market Data	92
Estimation Results.....	93
Model Fit.....	94
Causality Tests of the Total Market Series	94
Granger Causality Tests in the VARMAX Procedure.....	95
Causality Tests of the Production Series	96
Causality Tests That Use Extended Information Sets.....	97
Estimation of a Final Causality Model.....	99

Fit of the Final Model	100
Conclusion	101
Chapter 12: Bayesian Vector Autoregressive Models	103
Introduction	103
The Prior Covariance of the Autoregressive Parameter Matrices.....	103
The Prior Distribution for the Diagonal Elements	104
The Prior Distribution for the Off-Diagonal Elements	104
The BVAR Model in PROC VARMAX	105
Specific Parameters in the Prior Distribution	106
Further Shrinkage toward Zero.....	107
Application of the BVAR(1) Model.....	108
BVAR Models for the Egg Market	108
Conclusion	110
Chapter 13: Vector Error Correction Models.....	111
Introduction	111
The Error Correction Model.....	112
The Matrix Formulation of the Error Correction Model.....	113
The Long-Run Relation	113
A Simple Example: The Price of Potatoes in Ohio and Pennsylvania.....	114
A Simple Regression	115
Estimation of an Error Correction Model by PROC VARMAX.....	116
Dickey-Fuller Test Results.....	116
Estimated Error Correction Parameters.....	117
The $\alpha\beta^T$ Matrix	118
Properties of the Estimated Model.....	119
The Autoregressive Terms in the Model	120
Theory for Testing Hypotheses on β Parameters	120
Tests of Hypotheses on the β Parameters Using PROC VARMAX	122
Tests for Two Restrictions on the β Parameters	123
Estimated α Parameters under the Restrictions	123
Tests of Hypotheses on the α Parameters by PROC VARMAX.....	124
The TEST Statement for Hypotheses on the α Parameters.....	126
The RESTRICT Statement for the β Parameters.....	126
Restrictions on Both α Parameters and β Parameters	127
Properties of the Final Model.....	128
Conclusion	129
Chapter 14: Cointegration	131
Introduction	131
Test for a Cointegration Relation in the Bivariate Case	132
Cointegration Test Using PROC VARMAX for Two Price Series	132
Cointegration Tests in a Five-Dimensional Series	133
Initial Estimates for the β Values.....	135
A Model with Rank 2	135

Use of the RESTRICT Statement to Determine the Form of the Model	138
Stock-Watson Test for Common Trends for Five Series	139
A Rank 4 Model for Five Series Specified with Restrictions	141
An Alternative Form of the Restrictions	142
Estimation of the Model Parameters by a RESTRICT Statement.....	143
Estimation with Restrictions on Both the α and β Parameters.....	144
Conclusion	145
Chapter 15: Univariate GARCH Models	147
Introduction	147
The GARCH Model	148
GARCH Models for a Univariate Financial Time Series	149
Use of PROC VARMAX to Fit a GARCH(1,1) Model.....	150
The Fitted Model.....	151
Use of PROC VARMAX to Fit an IGARCH Model.....	153
The Wage Series	155
Use of PROC VARMAX to Fit an AR(2)-GARCH(1,1) Model.....	157
The Conditional Variance Series.....	157
Other Forms of GARCH Models	158
The QGARCH Model.....	158
The TGARCH Model	159
The PGARCH Model	161
The EGARCH Model	162
Conclusion	164
Chapter 16: Multivariate GARCH Models	165
Introduction	165
Multivariate GARCH Models	165
The CCC Parameterization.....	165
The DCC Parameterization.....	166
The BEKK Parameterization.....	167
A Bivariate Example Using Two Quotations for Danish Stocks.....	168
Using the CCC Parameterization.....	169
Using the DCC Parameterization.....	170
Using the BEKK Parameterization.....	172
Using the CCC Bivariate Combination of Univariate TGARCH Models	172
Conclusion	173
Chapter 17: Multivariate VARMA-GARCH Models	175
Introduction	175
Multivariate VARMA-GARCH Models.....	175
The Wage-Price Time Series	176
A VARMA Model with a CCC-GARCH Model for the Residuals.....	176
A VARMA Model with a DCC-GARCH Model for the Residuals.....	178
Refinement of the Estimation Algorithm	178

The Final VARMA Model with DCC-GARCH Residuals.....	180
Conclusion	184
References.....	185
Index.....	187
