Chapter 1- An Introduction to Reading Raw Data with SAS

Overview	1
Methods of Reading Raw Data	2
Understanding Data Sources	3
Understanding Data Values	4
Reading Raw Data with the INPUT Statement	5
A Checklist in Specifying Your External File	11

Chapter 2- Specifying the Structure of External Files

Introduction	13
Example Overview	14
Example 2.1 Reading Space Delimited Data	16
Example 2.2 Reading Comma Delimited Data	19
Example 2.3 Reading Tab Delimited Data	21
Example 2.4 Reading Delimited Data Where the Delimiter May Be Part of the Data ..	23
Example 2.5 Reading Missing Data Values When the Values Are Not Aligned in Columns	27
Example 2.6 Reading Nonstandard Data Values That Are Not Aligned in Columns ...	30
Example 2.7 Reading Multiple External Files	33
Example 2.8 Reading Multiple External Files Where the Names of the External Files Are Stored in Another External File	41
Example 2.9 Reading from Multiple External Files and Determining the Names of the External Files within the DATA Step	46
Example 2.10 Obtaining the Name of the External File Currently Being Read	50
Example 2.11 Reading Column Aligned Data from Variable Length Data Lines	55
Example 2.12 Processing Missing and Incomplete Data When Reading Column Aligned Data from Variable Length Data Line	59
Example 2.13 Stopping a DATA Step If Data Values Are Not Found in the Current Data Line	61

Chapter 3- Controlling How SAS Reads External Files

Introduction	66
Example Overview	66
Example 3.1 Reading Multiple Data Lines to Create a Single Observation	68
Example 3.2 Creating Multiple Observations from a Single Data Line	72
Example 3.3 Creating Multiple Observations from a Single Data Line and Retaining Identifier Information from the Data Line for Each Observation	74

Example 3.4	Reading Repeating Data Values When the Number of Repeating Data Values is Known	79
Example 3.5	Creating a Single Observation from an Unknown Number of Data Lines	82
Example 3.6	Reading Data with Varying Record Layouts	85
Example 3.7	Reading Hierarchical Data Lines	97
Example 3.8	Reading Variable Width Data Values That Are Not Delimited	103
Example 3.9	Reading Varying Width Data Values That Are Not Delimited and Calculating the Width within the DATA Step	107
Example 3.10	Detecting When SAS Reaches the End of an External File	112
Example 3.11	Limiting the Number of Data Lines Read from an External File	117
Example 3.12	Reading Special Missing Values	122
Example 3.13	Updating a SAS Data Set with Transactions Read from an External File	126
Example 3.14	Reading Nonstandard Numeric Data Values and Converting Them to Standard Numeric Data Values by Examining the Data Value	134
Chapter 4- Operating System Specific Features When Reading External Files		
	Introduction	140
	Example Overview	140
Example 4.1	Directory-based Systems: Reading Wide Records	142
Example 4.2	Reading from Multiple External Files That Have the Same Layout	146
Example 4.3	Reading an External File That Is in One of Several Directories	150
Example 4.4	Specifying the Name of an External File When Starting a SAS Session	154
Example 4.5	Obtaining Information About the Characteristics of an External File	158
Example 4.6	Reading an External File from a Remote System, Creating a Data Set on the Remote System, and Presenting the Data Locally	164
Example 4.7	OS/390: Reading Data from Specific Members of a Partitioned Data Set	168
Example 4.8	OS/390: Reading a VSAM KSDS Data Set	173
Example 4.9	Directory-based Systems: Reading a Fixed-Length EBCDIC File on an ASCII System	177
Example 4.10	Reading Variable-Length Data Lines from a Binary Stream File	184
Example 4.11	Directory-based Systems: Reading Multiple External Files from a Directory	188
Example 4.12	Reading an External File That Contains Carriage-Control Characters in the First Byte	194
Example 4.13	OS/390: Reading an External File Created by a COBOL Program	198
Example 4.14	OpenVMS: Reading an External File Stored on a Tape	202
Example 4.15	OS/390: Reading an External File Stored on a Tape	209
Example 4.16	UNIX: Reading an External File from Tape	213

Chapter 5- Importing External Files with the Import Wizard and the External File Interface	
Introduction217
Example 5.1 Reading Delimited Data Values with the Import Wizard219
Example 5.2 Reading Delimited Data Values with the External File Interface (EFI)226
Chapter 6- Using ACCESS Methods and the XML LIBNAME Engine to Read Data	
Introduction235
Example 6.1 Reading from an External File Stored on a Remote Host with the FTP Access Method237
Example 6.2 Reading Multiple Files Stored on a Remote Host with the FTP Access Method240
Example 6.3 Transmitting Data Between SAS Applications through a TCP/IP Socket ..	.246
Example 6.4 Reading an Entry from a SAS Catalog250
Example 6.5 Reading a Microsoft Excel Worksheet with DDE252
Example 6.6 Reading Data from a Web Page256
Example 6.7 Reading an XML Document259
Index263
