# Index

Page numbers followed by *f* and *t* refer to figures and tables, respectively.

- Accumulated local effects (ALEs), 67
- Activation function, 138*f*
- Active-set algorithms, 133, 134
- Adjustments, model, 121
- Adversarial testing, 67–68
- Agile practices, for ModelOps, 97–98
- AI, *see* Artificial intelligence
- Allocation model (collateral optimization), 147
- Alternative data, 17, 22–23
- Amazon (company), 3, 42
- Amazon River basin, 154
- Anchoring bias, 79
- Anomaly detection, 120
- Artificial intelligence (AI), xiii, 2–4, 17, 32, 41–42
  - benefits of, to risk function, 32–35
  - definition of, 2, 41
  - development of, 41–42
  - to manage effects of climate change, 170–172
- Artificial neural networks, 49, 50, 50*f*
- Assets, in collateral optimization, 146
- Attribution analysis, 68
- Australian Prudential Authority (APRA), 124–125
- Automated machine learning (AutoML), 50–51
- Automated teller machine (ATM), 11
- Average odds, 81
- Backtesting, 116–117
- Banking industry, 3, 11, 16, 35–37, 101–102, 124, 152–153, 157
- Bank of England (BOE), 163, 164*f*, 165–166
- Basel Committee on Banking Standards (BCBS), 16, 18, 19*f*, 20, 25, 169
- Batch processing, 98
- Bayesian networks, 139*f*

- BCBS, *see* Basel Committee on Banking Standards
- Benchmarking, 116–117
- Bias:
- assessing, in AI systems, 73, 74*f*, 75–76
  - cognitive, 78–79
  - detection of, 80–82, 83*f*, 84–85
  - and machine learning monitoring, 106, 121
  - origins of, in AI systems, 76–77
  - types of, 78–79
- Biennial exploratory scenario (BES), 163, 164*f*
- Big data, 17
- Black-box solvers, 134,
- Bootstrapping, 28
- Built-in governance
- guardrails, 109–110, 111*f*–112*f*, 112
- Bushfires, 153
- Carbon dioxide (CO<sub>2</sub>), 152
- Carbonic acid, 153
- Carbon sinks, 153
- CFPB, *see* Consumer Financial Protection Bureau
- Characteristic stability index (CSI), 116
- Claims processing, 38–39
- Classification and regression trees (CART), 137*f*
- Climate change (climate risk), 9, 10, 150–172
- difficulty of understanding economic impacts of, 160–161
  - examples of using AI to manage effects of, 170–171
  - and financial stability, 157–158
  - regulatory and compliance measures, 161–162
  - strengthening analytics frameworks in response to, 167–170
  - stress testing to evaluate potential impact of, 163–164, 165*f*, 166–167
  - understanding the magnitude of, 152–154
  - United Nations and, 154–156, 155*t*
- Cognitive biases, 78–79
- Collateral
- optimization, 146–147
- Complex models, manual recoding of, 95, 96*f*
- Complex risk calculations, approximation of, 40
- Compliance:
- climate change and, 161–162
  - and machine learning monitoring, 122–125
- Compliance risk, 9*t*

- Comprehensive Capital Analysis and Review (CCAR), 33
- Concept drift, 115
- Confirmation bias, 79
- Conjugate gradient (CG), 133
- Constrained solvers, large-scale nonlinear, 133
- Constraints, optimization, 132
- Consumer Credit Protection Act, 80
- Consumer Financial Protection Bureau (CFPB), 58, 77, 122
- Continuous model monitoring, 103
- Convex optimization, 131, 131*f*, 132, 134
- COP26 agreement, 160
- Correlation analysis, 82
- Cost model (collateral optimization), 147
- Counterfactual analysis, 65, 66, 82
- Counterparties, in collateral optimization, 147
- COVID-19 pandemic, xiii, 6–8, 32, 34, 39–40, 87, 121
- Credit risk (credit decisioning), 9*t*, 27, 58, 73, 76–77, 144–145, 146*f*, 147. *See also* Regulation B
- Cross referencing, 82
- Cultural bias, 77
- Cyber-physical systems, 2
- Data:
- alternative, 17, 22–23
  - exponential growth of, 4
- Database management systems, deployment of models in, 99–100
- Data drift, 115
- Data governance, 18–20
- Data management, 20–22
- Data minimization, 123*t*
- Data preprocessing, 28–29
- Decay, model, 106, 115
- Decision-making, 72–89
- fairness in, 77–78
  - model deployment for, 100, 101, 101*f*
  - right to not be subject to automated, 123*t*
  - types of bias in, 78–79
- Decision models, 25, 27
- Decision trees, 138*f*
- Deep Blue, 35
- Deep learning, 45–46, 47*f*, 48–51
- Deepmind project, 172
- Deforestation, 153
- Degradation, model, 106, 115
- De-identification, 123*t*
- Demographic parity, 81

- Deployment of machine
  - learning models, 92–104
  - case study, 101–102
  - challenges of, 93–98
  - post-deployment
    - management, 103, 103*f*, 104
  - practical considerations
    - with, 102, 103
  - scenarios for, 98–101, 101*f*
- Derivative-free
  - optimization, 133, 142
- Disorderly scenarios (climate change), 167
- Domestic Important Banks, 35
- El Nino-Southern Oscillation (ENSO), 153
- Enigma machine, 41
- Equal Credit Opportunity Act (ECOA), 58, 77, 80, 84, 122–124
- Equality constraints, 132
- Equalized odds, 81
- Equal opportunity metric, 81
- European Banking Authority (EBA), 124, 157
- European Central Bank (ECB), 124
- European
  - Commission, 122, 125
- European Union, 107, 122, 125
- Explainability (of risk models), 59–69
- Explainable AI (XAI), 69
- External data, 24*t*
- Extreme weather events, 153–154
- Fair Credit Reporting Act, 80
- Fairness, in AI systems, 75, 77–82
- False omission rate balance, 81
- False positive rate balance, 81
