

From *Strategies for Formulations Development*.
 Full book available for purchase [here](#).

Contents

Preface	vii
About This Book	xv
About These Authors.....	xxiii
Part 1: Fundamentals.....	1
Chapter 1 Introduction to Formulations Development.....	3
Overview	3
1.1 Examples of Formulations	4
1.2 How Formulation Experiments are Different	6
Displaying Formulation Compositions Using Trilinear Coordinates.....	8
1.3 Formulation Case Studies.....	10
Food Product	11
Pharmaceutical Tablet Formulation	13
Lubricant Formulation.....	15
Pharmaceutical Tablet Compactability.....	17
1.4 Summary and Looking Forward	19
1.5 References.....	19
Chapter 2 Basics of Experimentation and Response Surface Methodology	21
Overview	21
2.1 Fundamentals of Good Experimentation.....	22
Well-Defined Objectives	23
High Quality Data.....	23
How Many Formulations or Blends Do I Need to Test?	32
2.2 Diagnosis of the Experimental Environment.....	33
2.3 Experimentation Strategy and the Evolution of the Experimental Environment.....	34
Screening Phase.....	36
Optimization Phase	37
2.4 Roadmap for Experimenting with Formulations.....	37

Part 2: Design and Analysis of Formulation Experiments	41
Chapter 3 Experimental Designs for Formulations	43
Overview	43
3.1 Geometry of the Experimental Region.....	44
3.2 Basic Simplex Designs	45
3.3 Screening Designs	48
3.4 Response Surface Designs	51
3.5 Summary and Looking Forward	53
3.6 References.....	54
Chapter 4 Modeling Formulation Data.....	55
Overview	55
4.1 The Model Building Process	56
4.2 Summary Statistics and Basic Plots	59
4.3 Basic Formulation Models and Interpretation of Coefficients	60
4.4 Model Evaluation and Criticism.....	65
4.5 Residual Analysis	69
4.6 Transformation of Variables	82
4.7 Models with More Than Three Components.....	86
4.8 Summary and Looking Forward	90
4.9 References.....	90
Chapter 5 Screening Formulation Components	93
Overview	93
5.1 Purpose of Screening Experiments	94
5.2 Screening Concepts for Formulations.....	95
5.3 Simplex Screening Designs	99
5.4 Graphical Analysis of Simplex-Screening Designs	107
5.5 After the Screening Design	113
5.6 Estimation of the Experimental Variation	114
5.7 Summary and Looking Forward	115
5.8 References.....	115
Part 3: Experimenting With Constrained Systems.....	117
Chapter 6 Experiments with Single and Multiple Component Constraints.....	119
Overview	119
6.1 Component Constraints	120

6.2 Components with Lower Bounds.....	121
6.3 Three-Component Example.....	123
6.4 Computation of the Extreme Vertices	124
6.5 Midpoints of Long Edges	127
6.6 Sustained Release Tablet Development - Three Components	129
6.7 Four-Component Flare Experiment	135
Computation of the Vertices	135
Number of Blends Required	137
Addition of the Constraint Plane Centroids.....	137
Regions with Long Edges.....	138
Evaluation of the Results.....	139
6.8 Graphical Display of a Four-Component Formulation Space	140
6.9 Identification of Clusters of Vertices	143
6.10 Construction of Extreme Vertices Designs for Quadratic Formulation Models... 144	
Replication and Assessing Model Lack of Fit	145
6.11 Designs for Formulation Systems with Multicomponent Constraints	147
6.12 Sustained Release Tablet Formulation Study.....	150
6.13 Summary and Looking Forward	155
6.14 References.....	156
Chapter 7 Screening Constrained Formulation Systems	157
Overview	157
7.1 Strategy for Screening Formulations.....	158
7.2 A Formulation Screening Case Study	159
7.3 Blending Model and Design Considerations.....	161
7.4 Analysis: Estimation of Component Effects.....	163
Calculating Component Effects: Examples	165
7.5 Formulation Robustness	168
7.6 XVERT Algorithm for Computing Subsets of Extreme Vertices.....	171
Eight-Component XVERT Design and Analysis.....	175
7.7 Summary and Looking Forward	179
7.8 References.....	180
Plackett-Burman Designs for 12, 16, and 20 Runs	181
Chapter 8 Response Surface Modeling with Constrained Systems....	185
Overview	185
8.1 Design and Analysis Strategy for Response Surface Methodology.....	186
8.2 Plastic Part Optimization Study.....	187
8.3 Quadratic Blending Model Design Considerations	188
8.4 Example – Plastic Part Formulation	190

8.5 Example – Glass Formulation Optimization	195
8.6 Using the XVERT Algorithm to Create Designs for Quadratic Models.....	201
8.7 How to Use Computer-Aided Design of Experiments.....	205
8.8 Using JMP Custom Design	207
8.9 Blocking Formulation Experiments.....	209
8.10 Summary and Looking Forward	213
8.11 References.....	213
Part 4: Further Extensions	215
Chapter 9 Experiments Involving Formulation and Process Variables	217
Overview	217
9.1 Introduction	218
9.2 Additive and Interactive Models	219
9.3 Designs for Formulations with Process Variables	221
9.4 The Option of Non-Linear Models	225
9.5 A Recommended Strategy	229
9.6 An Illustration Using the Fish Patty Data.....	231
9.7 Summary and Looking Forward	235
9.8 References.....	236
Chapter 10 Additional and Advanced Topics	237
Overview	237
10.1 Model Simplification	238
10.2 More Advanced Model Forms	241
Common Alternative Model Forms.....	242
Application of Alternative Models to the Flare Data	244
10.3 Response Optimization	247
10.4 Handling Multiple Responses	250
The Derringer and Suich Approach	252
10.5 Multicollinearity in Formulation Models	255
What Is Multicollinearity?.....	255
Quantifying Multicollinearity.....	257
The Impact of Multicollinearity.....	259
Addressing Multicollinearity	260
10.6 Summary	263
10.7 References.....	263
Index	265
