

System Requirements

SAS® Profitability Management 2.4

This document provides requirements for installing and running SAS Profitability Management 2.4. It has been updated for the third maintenance release of SAS Profitability Management 2.4 (2.4M3), and for the eighth maintenance release of SAS 9.4, SAS 9.4M9.

Update your machine to meet the minimum software and hardware requirements before installing SAS Profitability Management.

Deployment Options

SAS Profitability Management 2.4 can be installed on multiple servers that are running a supported Windows or UNIX operating system. The most complex deployment resembles the following:

- Server Machine 1: Web Application Server.
- Server Machine 2: Workspace Server, OLAP Server and Transaction Assignment Server.
- Server Machine 3: Metadata Server. This may be an existing SAS Metadata server.

The following table summarizes the operating-system options that are available for the SAS Profitability Management Middle Tier.

Mid-Tier Architecture	Database	Web Server
Windows 2016 64-bit Windows 2019 64-bit Windows 2022 64-bit	SAS Data Sets	SAS Web Application Server
Linux	SAS Data Sets	SAS Web Application Server

For a mixed-machine architecture, contact SAS Technical Support.

SAS Profitability Management only supports SAS proprietary encryption.

Supported Operating Systems and Versions

For information about patch levels, use the menus to see support information for SAS 9.4 on the following web page: <https://support.sas.com/supportos/list>.

Windows Server Operating Systems

The following Windows operating systems are supported for the Server Tier:

- Microsoft Windows Server 2022 (64-bit) Standard, Datacenter, Essentials, and Foundation editions
- Microsoft Windows Server 2019 (64-bit) Standard, Datacenter, Essentials, and Foundation editions
- Microsoft Windows Server 2016 (64-bit) Standard, Datacenter, Essentials, and Foundation editions

SAS Profitability Management only supports 64-bit operating systems for the server software.

Server Requirements

The number and size of models and their associated analysis cubes affect all factors of hardware-related performance. The applicability of a specific server platform is primarily dependent on data volumes. The minimum and preferred hardware platforms that are described in this section are therefore estimations only. The minimum server configuration is required to operate the software and perform relatively small analyses.

As data volumes increase, the processing times will also increase. An upgrade of your server hardware might eventually be required to achieve faster processing.

Server Hardware Requirements

The following table summarizes server hardware requirements:

Minimum Level	Preferred Level
<p>The following configuration is recommended for small-size transaction tables (up to 10 million transaction rows per period) and up to 10 report viewers.</p> <p>1) Unified Server: Dual Processor 64-bit, 2.0 GHz, 4 GB RAM, 200 GB of disk space (for models, transaction tables, and cubes) ¹</p>	<p>This configuration is recommended for medium-size transaction tables (up to 100 million transaction rows per period) and up to 50 report viewers. ²</p> <p>1) Middle-Tier Server: Dual Processor 64-bit, 2.0 GHz, 4 GB RAM or more, 100 GB of disk space</p> <p>2) Metadata Server ³: Dual Processor 64-bit, 2.0 GHz, 4 GB RAM or more, 100 GB of disk space</p> <p>3) Workspace Server, OLAP Server and Transaction Assignment Server: Quad-core processor (64-bit), 3.0 GHz, 8 GB RAM, 800 GB of disk space (preferably with an enhanced hard disk subsystem) ¹</p>

- ¹ Calculating OLAP fact tables and cubes can require hundreds of gigabytes of additional disk space in some cases. The disk space estimates provided represent typical usage. The actual amount of disk space used by any installation varies based on the types and number of analyses performed. Consult your sales representative or SAS Technical Support for more information.
- ² For hardware specifications that will accommodate larger transaction tables and/or a larger number of report viewers, consult SAS Technical Support.
- ³ For typical installations, the Metadata Server can be shared among all installed SAS applications. A dedicated machine for SAS Profitability Management is not required.

Unified Server Software Requirements

The following table summarizes unified server software requirements:

Item	Minimum Level
Operating System	Windows Server or Linux Server
SAS Components	SAS Web Report Studio 4.4

SAS Servers	Base SAS 9.4M9 SAS Metadata Server 9.4M9 SAS Workspace Server 9.4M9 SAS OLAP Server 9.4M9
Web Server	SAS Web Application Server 9.4M9
Java	A private JRE is provided by SAS and installed by the SAS Deployment Wizard

For information about operating-system patch levels, consult the System Requirements for your operating system, available from the [SAS 9.4 Foundation Guides](#) page.

Middle-Tier (Web Application Server)

The following table summarizes requirements for the web application server:

Item	Minimum Level
Operating System	Windows Server or Linux Server
SAS Components	SAS Web Report Studio 4.4
Web Server	SAS Web Application Server 9.4M9
Java	A private JRE is provided by SAS and installed by SAS Deployment Wizard

SAS Metadata Server Software Requirements

The following table summarizes software requirements for the SAS Metadata Server:

Item	Minimum Level
Operating System	Windows Server or Linux Server
SAS Servers	Base SAS 9.4M9 and SAS Metadata Server 9.4M9
Java	A private JRE is provided by SAS and installed by SAS Deployment Wizard

Workspace Server, OLAP Server, and Transaction Assignment Server Software Requirements

The following table summarizes software requirements for the Workspace Server, OLAP server, and Transaction Assignment Server.

Due to the disk-intensive nature of OLAP and Transaction Assignment processing, this machine should have an enhanced hard disk subsystem for increased throughput.

Item	Minimum Level
Operating System	Windows Server or Linux Server

SAS Servers	SAS Foundation 9.4M9 SAS OLAP Server 9.4M9 SAS Workspace Server 9.4M9 SAS/ACCESS engine if you access any RDMS
Java	A private JRE is provided by SAS and installed by SAS Deployment Wizard

Contact SAS Technical Support

Technical support is available to all customers who license SAS software. However, you are encouraged to engage your designated on-site SAS support personnel as your first support contact. If your on-site SAS support personnel cannot resolve your issue, they can [open a case with SAS Technical Support](#) to report your problem.

Before you contact SAS Technical Support, explore the SAS Support website at support.sas.com/techsup/. This site offers access to the SAS Knowledge Base, SAS communities, and other materials that might answer your questions.

When you contact SAS Technical Support, you are required to provide information, such as your SAS site number, company name, email address, and phone number, that identifies you as a licensed SAS software customer.
