## ABSTRACT

The SAS 9 platform provides a framework for integration across the SAS Business Intelligence clients. Regardless of whether the application is web-based or a desktop client, SAS canThe SAS® 9 platform provides a framework for integration across the SAS® business intelligence clients. Regardless of whether the application is Web-based or a desktop client, SAS® can share content from one application to other applications. This drives consistency and accuracy of information, allowing all stakeholders in the company to understand the underlying factors for decisions. An excellent example of this integration can be demonstrated via the SAS® 9.2 prompting architecture. Prompts for parameterization can be built, shared, and surfaced in a consistent manner across all of our SAS applications. These can be simple prompts or complex prompts involving dynamic queries and cascading values. share content from one application to other applications. This drives consistency and accuracy of information, allowing all stakeholders in the company to understand the underlying factors for decisions. An excellent example of this integration can be demonstrated via the SAS 9.2 prompting architecture. Prompts for parameterization can be built, shared, and surfaced in a consistent manner across all of our SAS applications. These can be simple prompts or complex prompts involving dynamic queries and cascading values.
