Paper 291-2008

Understand Your Data from the Metadata Layer to the Data Layer

Lisa Dodson, SAS Institute Inc.
Pat Herbert, SAS Institute Inc.

ABSTRACT

Together, dfPower Profile and dfPower Explorer enable you to gain the most insight into the state of your data. You can identify data redundancies and extract and organize metadata from multiple sources. Relationships between metadata can be identified and cataloged into types of data by specified business data types and processes. You can analyze your data using profiling metrics. These metrics make it possible to preview the structure of your data, thus helping you to gain valuable insight into the quality and integrity of your content in an effort to meet your specific data needs.
