DataFlux® 8: Accelerate to Improved Data Quality

Pat Herbert, SAS Institute Inc.

ABSTRACT

DataFlux® has delivered unparalleled improvements in its enterprise data quality offerings with the release of DataFlux 8. These new and improved capabilities include metadata analysis, business rules monitoring, fuller international data quality capabilities, and DataFlux accelerators as well as numerous improvements to the existing platform to ease usability and to reduce implementation efforts. This paper will discuss the new and improved features that DataFlux has delivered with its Version 8 product set. These new and improved offerings include dfPower® Explorer—an application intended to simplify large-scale metadata analysis of existing data stores. Improved functionality and flexibility for data monitoring through more robust and configurable dashboard features is another key feature. In addition, Version 8 allows you to manage data from an increasing array of languages and geographies, including double-byte languages. These additions, combined with the enhanced user interface, have resulted in a very compelling product set to help you truly accelerate to the goal of improved data quality.
