Exploring OLAP Cubes

Justin Choy, SAS Institute Inc.
Michelle Wilkie, SAS Institute Inc.

ABSTRACT

In today's BI reporting world, it is essential to analyze and answer your business needs faster. OLAP is a part of the SAS® BI offering that allows users to:
• look at different relationships in data, looking beyond traditional two-dimensional row and column data analysis
• offer fast access to large amounts of pre-summarized data
• provide slice-and-dice views of multiple relationships in large quantities of pre-summarized data
• easily give users the power to quickly retrieve answers to multidimensional business questions.

This presentation aims to highlight SAS OLAP reporting capabilities, while addressing some of the business questions out there today.

No paper was submitted for publication.
