ABSTRACT

This workshop provides hands-on experience using the SAS® Add-In for Microsoft Office, SAS® Enterprise Guide®, and SAS® Web Report Studio.

Workshop participants will:
- access a data mart data source and perform an analysis from Microsoft Excel using the SAS Add-In for Microsoft Office
- use SAS Enterprise Guide to perform additional analysis on a data mart data source and turn that analysis into a stored process that can be accessed from any of the SAS® business intelligence applications
- use the SAS Add-In for Microsoft Office to include results from the new stored process into a Microsoft PowerPoint presentation
- build reports from the data mart data sources and the new stored process using SAS Web Report Studio

No paper was submitted for publication.
