ABSTRACT

SAS® 9.2 supports Integrated Windows Authentication (IWA) as well as improved single signon (SSO) between SAS servers on all platforms. IWA is supported from Windows desktops to Windows backend servers when in the same or trusted domain. This allows users to connect to Windows-based SAS servers, without supplying or saving their username and password, in a safe, secure manner using standard Windows technology. This technology also supports multi-factor authentication such as smart cards and biometrics. In addition, we have improved SSO among SAS servers on all platforms to reduce credential passing and storage.

No paper was submitted for publication.
