Case Studies in Using SAS® Information Map Studio to Solve Query and Reporting Challenges

Diane Hatcher, SAS Institute Inc.
Ken Matz, SAS Institute Inc.

ABSTRACT

SAS® Information Map Studio is a desktop application that creates and administers information maps. Information maps are metadata definitions that surface physical data structures in terms that business users understand. One element of this metadata layer is to generate queries based upon a user's selection. This presentation will talk about how information maps should be utilized and provide examples of how to design the information map to overcome query and reporting challenges.
