ABSTRACT

SAS® Model Manager is a new product that allows users to manage a model's lifecycle and its performance. A model has different meanings for different applications. To SAS Model Manager, a model is a collection of files and properties. SAS Model Manager provides a plug-in framework using a model template to allow users to define models. It also provides a plug-in framework using a report template to allow users to define reports and project management lifecycles. All templates are based on XML code and SAS® code. This paper describes the structure of these templates and SAS programs; it also provides examples of how to customize SAS Model Manager for users' environments.

No paper was submitted for publication.
