

Paper 62-27**The Basics of Creating Graphs with SAS/GRAPH® Software**

Jeff Cartier, Cary, NC

ABSTRACT

SAS/GRAPH software is a very powerful tool for creating a wide range of business and scientific graphs. This presentation provides an overview the types of graphs that can be produced with SAS/GRAPH software and the basic procedure syntax for creating some of them, including bar charts, plots and maps. You will understand how to identify the appropriate variables of your data for the graph you want and how to customize its appearance. You will also see how to send graphs to various output targets such as printers or files such as RTF or PDF as well as how to use the Output Delivery System to create HTML files with GIF, ActiveX, or Java graphical content. In conclusion, you will see an interactive application included with SAS/GRAPH software that can be used to create many types of graphs and graphical output formats, including generation of SAS/GRAPH programs.
